ISO 9002 Certified Plants

Prices and data indicated in this document are for your convenience and were correct at time of printing with the exception of clerical and/or printing errors. Possession of this document by any person or company is not to be construed as an offer to sell to him or to anyone else the goods listed herein at the prices stated.

ALL DATA AND PRICES ARE SUBJECT TO CHANGE WITHOUT NOTICE and shall be subject to those prices in effect at time of shipments. All published and quoted prices are based upon the application of, and all sales are expressly subject to, the Company's Standard Terms and Conditions of Sales are available upon request. This document supersedes all previously published catalog/pricing documents.

**WARNING**

The information provided for Product Interchange in this catalog is for use only as a general reference by persons qualified to recognize unreasonable selection options. Products suggested as substitutes may have dimensional, rating, pricing and other differences from products to be replaced. This selection method must be used in conjunction with the applicable product catalog which contains important precautions and other pertinent information.

In illustrations throughout this catalog, safety guards have been removed for photographic purposes.

© 2015 Baldor Electric Company

**WARNING:** Because of the possible danger to person(s) or property from accidents which may result from the improper use of products, it is important that correct procedures be followed: Products must be used in accordance with the engineering information specified in the catalog. Proper installation, maintenance and operation procedures must be observed. The instructions in the instruction manuals must be followed. Inspections should be made as necessary to assure safe operation under prevailing conditions. Proper guards and other suitable safety devices or procedures as may be described or as may be specified in safety codes should be provided, and are neither provided by Baldor Electric nor are the responsibility of Baldor Electric. This unit and its associated equipment must be installed, adjusted and maintained by qualified personnel who are familiar with the construction and operation of all equipment in the system and the potential hazards involved. When risk to persons or property may be involved, a holding device must be an integral part of the driven equipment beyond the speed reducer output shaft.

## COUPLINGS

### PARA-FLEX Couplings Page PT1-2

- Torque transmitted through composite element system
- Finished-bore and TAPER-LOCK® flange designs
- Five-year limited warranty
- No lubrication and visual inspection reduces maintenance time
- Accommodates highest misalignment of any coupling in the industry
  - 4° angular
  - 1/8" parallel
  - 5/16" end float
- ATEX Approved

### D-FLEX Couplings Page PT1-29

- Low-cost Type J couplings offered in four sizes
- Type S couplings feature AGMA 9 balanced flanges off the shelf
- Type B couplings offered with standard QD bushing shaft attachment
- Type SC spacer couplings satisfy standard spacing requirements for pump
- Rounded EPDM and Neoprene elements for improved fit and longer
- AGMA 9 balance on S and SC flanges for reduced vibration
- ATEX Approved

#### Applications

- Interchangeable components make installation quick, easy
- No lubrication assures trouble-free operation

### GRID-LIGN Couplings Page PT1-42

- Flexible tapered element isolates vibration and cushions shock loads
- High-torque capability
- Interchangeability with other tapered grid couplings
- Tapered grid design

### Gear Couplings Page PT1-60

- High-quality forged steel
- Largest tooth profile provides additional service factor
- Largest bore capacity in the industry, in most sizes
- Proven "O"-ring seal design
- Machined flanges for improved sealing
- High-grade fasteners
- High-torque rating allows for coupling downsizing
- Crowned tooth profile for longer life and improved performance
- Interchangeable with industry-standard gear couplings half for half

### Chain Couplings Page PT1-66

- Simple, widely accepted, inexpensive way to couple two shafts
- Interchangeable with industry-standard dimensions
- Can be provided with TAPER-LOCK bushed hubs, finished bore, or reboreable flanges
- Covers and assemblies available from stock
- Shaft attachment flexibility
- High-torque capability
- Compact design
- Low operating cost
- Broad product line

### Poly-Disc Coupling Page PT1-73

- Requires no lubrication
- Taper-Lock bushing allows for connection of two different shaft sizes
- Polyurethane element
- Pin design cushions shock loads
- Excellent for washdown applications
- Wide temperature range (-90 to 170 ° F)
- Misalignment = 2° Angular, 1/32 in. parallel

Please see [www.baldor.com](http://www.baldor.com) for Instruction Manuals on all Dodge products.

# REFERENCE GUIDE

## Taper-Lock Rigid Coupling

Page PT 1-74

- Metallic coupling
- Requires no lubrication
- Taper-Lock bushing allows for connection of two different shaft sizes
- 8 Flange sizes thru 6" bore

## Ribbed Rigid Coupling

Page PT1-75

- Metallic coupling
- Requires no lubrication
- Clearance fit with full length key
- Same shaft size required on both sides
- 34 Sizes thru 7" bore

## POWERPLUS

Page PT1-76

- A power-dense, high torque elastomeric coupling
- Power density at high speeds
- Positive drive
- Shock load and vibration dampening
- Easy installation
- Low maintenance
- ATEX approved
- Minimal length thru bore
- Lightweight design

## D-Series Motor Brakes

Page PT2-6

- Exceptionally long-life friction material
- Internally rectified DC coil provides quieter operation
- Easy installation and external adjustment
- One moving part, reduces replacement parts
- Smooth stopping action
- Splined hub for superior load distribution
- Manual release
- Clutch/brake modules

## Clutch/Brake Modules

Page PT2-12

- Conforms to UL and CSA requirements
- One-piece, die-cast housing simplifies mounting; housing finned for maximum heat dissipation
- Pre-lubricated and sealed ball bearings have higher B10 life rating than competitive modules
- High-torque, non-asbestos friction material assures long life and environmental safety
- Armatures incorporate a high-impact, high-temperature molded spline for heavy-torque and high-cycle capabilities
- DYNA-GAP automatic air gap mechanism automatically compensates for friction surface wear
- Modules are factory assembled, adjusted, and burnished for easy installation and out-of-the-box operation
- Rotor incorporates ball bearing and Driv-Lok key for foolproof installation
- Standard NEMA C-face and base mounted, shaft-in/ shaft-out mounting configurations

## Shaft Mounted Clutches & Brakes

Page PT2-18

- Bore to size and taper lock bushings
- Voltage Input = 90, 24 and 6 VDC
- Static torque range: 22 lb-ft thru 175 lb-ft
- Factory assembled, adjusted, burnished
- Dyna-Gap self adjusting mechanism
- Heavy duty spline driven armature

Clutches and Brakes

FLEXIDYNE

Fluid Couplings

TORQUE-TAMER

Bushings

## FLEXIDYNE Couplings

### Page PT3-2

- Motor starts under no-load conditions
- Permits use of STD NEMA-B motor
- Coupling or drive styles available
- 100% efficient, no slippage
- Can provide overload protection by slipping at loads somewhat greater than pre-set starting torque

## Fluid Couplings

### Page PT4-1

- Motor starts under no-load conditions
- Starting torque can be customized easily
- Permits use of standard NEMA design B motors
- Reduced voltage starters not needed
- Sizes 7 to 24 KSD with standard QD mounting sheave style
- KCP and CKCP mountings may require tapped motor shaft
- Available in standard and delay fill for increased control
- Optional fuse plug for overload protection
- Contact DODGE for non-standard sheaves

## TORQUE-TAMER

### Page PT5-2

- DODGE TORQUE-TAMER Clutches
- Low cost overload protection that's a cinch to adjust
- Quality features
  - Non-Asbestos friction discs
  - Long-Life bushing
- Exclusive "easy set" adjustment
- Automatic reset
- Higher torque ratings
- Application versatility
- Minimum maintenance

## Bushings

### Page PT6-2

- Full line of TAPER-LOCK and QD available
- Stock sizes available up to 12" shaft diameter
- Material: sintered steel, cast iron, ductile iron, and stainless steel
- Easy installation and demounting
- Inch and metric bores

## Weld-On Hubs

### Page PT6-12

- Full line of TAPER-LOCK and QD available
- Steel material with rugged, compact designs
- Hubs to accommodate most bushing sizes
- Made-to-order capabilities—special construction and materials

## V-Belt Sheaves

### Page PT7-27

- Full line of TAPER-LOCK and QD available
- Classical (A, B, and C) and D-V Wedge style (3V, 5V, and 8V) groove profiles
- Stock sizes from one to 12 grooves and 2.65" to 71" in diameter
- Manufactured to MPTA standards
- MTO capabilities—material, construction, BTS, etc.
- Computer drive selection available

## V-Belts

### Page PT7-28

- Full range of Classical (A, B, and C) and D-V Wedge (3V, 5V, and 8V) belts
- Manufactured to RMA standards
- Poly-band, Double-V (hex), and FHP belts available
- Lengths from 22" to 660"
- Drive capability from 1 HP to over 1000 HP

# REFERENCE GUIDE

## FHP Belt Drives

### Page PT8-10

- Full range of FHP belts available
- Finished-bore and “QT/L” bushed style sheaves available
- “QT/L” bushings available in metric bores
- Cast iron and manufactured to MPTA standards
- Sheave outside diameter range: 1-1/2” to 19-3/4”
- Variable pitch sheaves available
- Computer drive selection available

## DYNA-SYNC Drives (Timing)

### Page PT10-2

The Original Timing Drive

- Synchronized No-Slip Transmission
- No Lubrication Required
- Efficiency: Approximately 98%
- Low Maintenance
- Virtually No Backlash
- Constant Linear Velocity
- Drive Ratios to 8.5:1
- Pitches: XL, L, H, and XH
- Dual-Sided Teeth Available for Serpentine Drives

## HT200/HTD Synchronous Belt Drives

### Page PT11-2

- Full line of TAPER-LOCK, QD, and minimum plain bore sprockets
- Higher capacity drives
- Available pitches: HT series, 5 mm, 8 mm, and 14 mm
- Made-to-order sprocket capabilities: construction, non-standard number of teeth, etc.
- HT200 belt profiles
- Computer drive selection available
- Modified curvilinear tooth profile

## HT500 Synchronous Belt Drives

### Page PT12-2

#### Virtually maintenance free

- Requires no oil or grease to run efficiently
- No need to re-tension the belts
- Compact maintenance free design

#### Reinforced Parabolic Tooth Profile (RPP)

- Allows synchronous transmission of power eliminating slippage and speed variation on high torque application
- Low installation tension reducing loads on other power transmission components (i.e., bearings, gearing, motors, etc.)
- Delivers power up to speeds of 10,000 FPM (Standard hardware is rated for 6,500 FPM). Contact Dodge if speeds greater than 6500 FPM are required.
- Superior meshing characteristics with the sprocket
- Reduces sprocket wear due to friction
- Higher power ratings than comparable timing belts
- Quieter operation
- Wide speed range coverage

## Roller Chain Sprockets

### Page PT13-2

- Sprockets manufactured to ANSI standard
- TAPER-LOCK sprockets: #35 (3/8” pitch) to #160 (2” pitch)
- Double-strand and double-single sprockets also available
- Special machining and re-bore capabilities available as made-to-order product
- Accessories available: chain casings, idlers, tensioners, etc.
- Hardened teeth up to 25 teeth on #40 through #160 sprockets
- Chain tools available

## Conveyor Components

### Heavy Duty Drum Pulley Assemblies Page PT14-15

- Standard, stock pulley assemblies fit CEMA dimensions and exceed the CEMA application standards for use with conveyor belts rated up to 750 PIW/(131 kN/m)
- 14° taper bushings with the lowest installation stress of any taper bushing shaft mounting system for two hub pulley applications
- Up to 1" vulcanized 45, 60, and 70 durometer SBR and 45, 60, and 70 durometer Neoprene rubber lagged with plain and groove surfaces
- Vulcanized 60 durometer D-Lag with +73% more abrasion resistance than 60 durometer SBR
- Drums either center crowned or straight face

Couplings

Clutches and Brakes

### Heavy Duty Wing Pulley Assemblies Page PT14-34

- Standard, stock pulley assemblies fit CEMA dimensions and exceed the CEMA application standards for use with conveyor belts rated up to 350 PIW/61 kN/m
- 14° taper bushings with the lowest installation stress of any taper bushing shaft mounting system for two hub pulley applications
- Slide-on 92 durometer urethane wing lagging 1/2" thick or 45, 60, and 70 durometer SBR, vulcanized directly to contact bars. Also weld-on strips with 45 and 60 durometer with prebonded SBR rubber lagging

FLEXIDYNE

Fluid Couplings

### Mine Duty Extra Drum Pulley Assemblies Page PT14-49

- One-piece integral hubs eliminate welded hub heat-affected zones (HAZ)
- 14° taper bushings with the lowest installation stress of any taper bushing shaft mounting system for two hub pulley applications
- Continuous welding of internal center disc
- Up to 1" vulcanized 45, 60, and 70 durometer SBR and 45, 60, and 70 durometer Neoprene rubber lagged with plain and groove surfaces
- Vulcanized 60 durometer D-Lag with +73% more abrasion resistance than 60 durometer SBR
- Drums either center crowned or straight face

TORQUE-TAMER

Bushings

### Mine Duty Extra Wing Pulley Assemblies Page PT14-53

- Designed for use with DODGE Mine Duty EXTRA drum pulleys
- One-piece integral hubs
- 14° taper bushings with the lowest installation stress of any taper bushing shaft mounting system for two hub pulley applications
- Rugged construction incorporating 2" x 3/4" thick contact bars, 3/8" thick wings, and 3/8" thick spacers
- Up to 1/2" vulcanized 45, 60, and 70 durometer SBR and 45, 60, and 70 Neoprene rubber lagging on contact bars
- AR400 bar available

### Engineered Drum Pulley Assemblies Page PT14-56

- Made to order based upon conveyor load, belt tension, belt wrap angles, and bearing centers
- Supplied for belt ratings up to and exceeding 8000 PIW or 1400 kN/m
- Welded, integral, and profiled end discs versions minimize the harmful effects of weld heat-affected zones (HAZ)
- 14° taper bushings with the lowest installation stress of any taper bushing shaft mounting system for two hub pulley applications up to 12" shaft diameter
- Keyless locking devices available for most shaft sizes

# FEATURES/BENEFITS

## DODGE PARA-FLEX Couplings

### Superior “Problem Solver” Element Design

- Industry leading misalignment capabilities
- End split reinforcement for increased torque ratings and extended life
- Reinforced torque-carrying tension cords prevent unexpected downtime
- Uniform and centered beads prevent element pull out during operation
- Protects connected equipment by damping vibrations and shock loads

### Industry Leading Five-Year Limited Warranty

- Over 50 years of proven performance
- Reliable product operation
- Includes sizes PX40 to PX200

### Increased Productivity

- Non-lubricated design assures trouble-free operation
- Visual inspection saves time and allows for preventive maintenance
- Split element for easy installation

### ATEX Approved

- All documents and markings included with standard product to meet ATEX requirements

### TAPER-LOCK Flange Design

- Utilizes standard TAPER-LOCK bushings for easy installation and removal
- Reversible flanges for H and F style mounting on sizes PX50-PX120
- “TLX” extended bore capacity flanges for increased bore capacities
- Pre-assembled for quick installation

### QD Flange Design

- Utilizes standard QD bushings for easy installation and removal
- Industry leading bore and torque capacities versus competitive designs
- Hardware installs from inside or outside of the hub for mounting flexibility
- Pre-assembled for quick installation

### Bored to Size

- Steel flanges are ideal for high shock load and vibration applications
- Largest bore capacity of all Para-Flex products

### Accommodates Misalignment

Takes 4° angular misalignment

Takes 1/8" parallel misalignment

Takes end-float of 1/4" to 5/16"

Dampens vibrations

## PARA-FLEX

### SPECIFICATION

PARA-FLEX Couplings employ a molded, non-lubricated elastomeric flexing member loaded in shear. The flexible element is compounded natural or neoprene rubber with textile cord reinforcement throughout and has an extra layer of reinforcement adjacent to the split for added durability. The compound of natural rubber element shall be suitable for operation in ambient temperature from -45°F to +180°F; Neoprene -40°F to +210°F.

The flexible element is attached by clamping between axially separable rings with exposed cap screws. The couplings are designed to be capable of accommodating combined misalignments of 4° angular, 1/8" parallel, and 5/16" end float at the full rating of the coupling without restricting the life of the coupling. The flexible element must be replaceable without disturbing the coupled equipment and without the requirement for realignment.

The coupling assemblies have optional methods of attachment to the shaft including but not limited to: clearance fit, interference fit TAPER-LOCK or QD bushings. Clearance fits are supplied with an industry standard keyway and two set screws, one over the key and one at 65°.

- 1 PX40: 4° angular, 1/16" parallel, 3/16" end float.
- 2 PX110: 4° angular, 1/8" parallel, 1/4" end float.
- 3 PH & PF: 1° angular, 1/16" parallel, 3/16" end float.

PARA-FLEX Couplings are static conductive.

### HOW TO ORDER

Standard couplings consist of:

- (2) Flange Assemblies
- (1) Flexible Element
- (2) Bushings (TL or QD)

### ATEX Approved

- All documents and markings included with standard product to meet ATEX requirements

- Notes:** (1) Space required to tighten bushing with shortened hex key.  
 (2) Space required to loosen bushing with shortened hex key.  
 (3) Weight of complete coupling with bushing.  
 (4) Inertia of complete coupling with bushing.

Flange assemblies may be combined or interchanged for a given element size.  
 Upon combination, dimensions B and E as well as mass and inertia should be average to determine appropriate value.

# SELECTION/DIMENSIONS

## Standard, TAPER-LOCK Part Numbers

### TAPER-LOCK Flange Assemblies

| Coupling Size | Flange Assembly Part No. |        | TAPER-LOCK Bushing Size |
|---------------|--------------------------|--------|-------------------------|
|               | Type H                   | Type F |                         |

- (1) Neoprene element ratings are the same as the standard natural rubber element ratings. (Green sticker or painted mark)
- (2) Cordless elements have an average static torsional stiffness 25% of the standard element and approximately 25% of the torque rating. (White sticker or painted mark)

\* PX50-PX120 have a reversible flange for type H or F mount  
Complete coupling consists of (2) TAPER-LOCK Flange Assemblies.

(2) Taper-Lock Bushings, and (1) Element.

For Taper-Lock Bushings, see page/section \_\_\_\_\_

- These flanges require a metric bushing, see page \_\_\_\_\_

(1) Space required to tighten bushing with shortened hex key  
 (2) Space required to loosen bushing with shortened hex key  
 (3) Weight of complete coupling with bushing  
 (4) Inertia of complete coupling with bushing  
 \* Metric hardware  
 ● Requires short series bushings to achieve maximum bore.  
 † Flange assemblies may be combined or interchanged for a given element size. Upon combination, dimensions B & E as well as mass and inertia should be averaged for appropriate value.  
 H = Hub Mount  
 F = Flange Mount

# SELECTION/DIMENSIONS

## Metric, TAPER-LOCK

Complete Para-Flex coupling consists of:  
one element, two PXMTL flange assemblies and two TL bushings

### Para-Flex Taper-Lock flange assemblies

| Coupling size | Type H      | Type F      |                         |
|---------------|-------------|-------------|-------------------------|
|               | Part Number | Part Number | Taper-Lock bushing size |

#### Notes:

- \* Have reversible flange for type H or F mount.
  - Requires short series bushing to achieve maximum bore.
- Metric bushing required  
For Taper-Lock designs, Taper-Lock bushings must be ordered separately.

Complete Para-Flex QD coupling consists of one element, two flanges, and two QD bushings.

**Notes:**

- (1) Neoprene element ratings are the same as the standard natural rubber element ratings. (Green sticker or painted mark)
- (2) Cordless elements have an average static torsional stiffness 25% of the standard element and approximately 25% of the torque rating. (White sticker or painted mark)

Complete coupling consists of:

- (1) TS Flange Assembly,
- (1) BS Flange Assembly, and
- (1) Element

\* Key furnished for shallow keyways.

+ Part numbers are finished bore flanges to fit mill motor sizes listed.

#### Complete coupling consists of:

- (1) BCS or BS Flange Assembly (depending on size of coupling),
- (1) BPS Flange Assembly, and
- (1) Element.

#### BCS Flange Assembly consists of:

1. External Clamp Ring
2. Internal Clamp Ring
3. BCS Flange

#### BPS Flange Assembly consists of:

1. External Clamp Ring
2. Piloted Internal Clamp Ring
  - a. Includes floating shaft bearing assembly
3. BS Flange

## FEATURES/BENEFITS

### PARA-FLEX High Speed and Flywheel Couplings

#### HIGH SPEED TYPE

- Compensates for misalignment
- Cushions thrust loads
- Absorbs vibration and shock
- Prolongs bearing life
- Available in TAPER-LOCK and bored to sizes

#### FLYWHEEL TYPE

- Specifically designed to connect the flexible element to standard SAE flywheel bolt patterns
- Available in TAPER-LOCK and bored to configurations

# SELECTION/DIMENSIONS

## High Speed, TAPER-LOCK

PH87 THRU PH131

PH172 thru PH252 STEEL FLANGE ASSEMBLY

PH172 & PH192 IRON FLANGE ASSEMBLY

+ Flange assembly uses a 1610 bushing with 1-11/16 max. bore

Disc assembly uses a 2517 bushing with 2-11/16 max. bore

\* Flange assembly uses a 2012 bushing with 2-1/8 max. bore

Disc assembly uses a 2517 bushing with 2-11/16 max. bore

**Complete coupling consists of:**  
**(1) TAPER-LOCK Flange Assembly, (1) TAPER-LOCK Disc Assembly, & (1) High speed Element.**  
**TAPER-LOCK bushings must be ordered separately.**  
**Refer to bushing section PT6-16.**

Complete coupling consists of: (1) BS Flange Assembly, (1) TAPER-LOCK Disc Assembly, (1) High Speed Element, and (1) TAPER-LOCK Bushing. TAPER-LOCK bushings must be ordered separately. Refer to bushing section PT6-16.

Unless otherwise specified, Size 60-120 BS flanges are clearance fit per AGMA 9002. Size 140-320 BS flanges are interference fit per AGMA 9002. See page \_\_ for additional details.

Complete coupling consists of: (1) TAPER-LOCK Flange Assembly (as selected), (1) Bolt Ring Assembly, (1) High Speed Element, and (1) TAPER-LOCK Bushing. TAPER-LOCK Bushings must be ordered separately.

See page PT1-34 for Flywheel & Power Take Off housing information. Refer to bushing section PT6-16.

Complete coupling consists of: (1) BS Flange Assembly, (1) Bolt Ring Assembly, and (1) High Speed Element.

Unless otherwise specified, Size 60-120 BS flanges are clearance fit per AGMA 9002. Size 140-320 BS flanges are interference fit per AGMA 9002.

See page \_\_ for additional details.

# FEATURES/BENEFITS

## D-FLEX Couplings

### FLEXIBLE SOLUTIONS LOW COST TYPE J COUPLINGS OFFERED IN FOUR SIZES

- Features zinc die-cast flanges that are bored to size
- Accommodates applications through 10 HP at 1750 RPM
- Available with EPDM or Neoprene sleeves
- Shaft attachment with two setscrews at 65°

### TYPE S COUPLINGS FEATURE AGMA 9 BALANCED FLANGES OFF THE SHELF

- High-strength, cast iron flanges that are finished bored for AGMA clearance fit
- Ionized powder coated flanges for superior corrosion protection
- Available with EPDM, Neoprene or Hytel\* sleeves
- Shaft attachment with two setscrews at 65°

### TYPE B COUPLINGS OFFERED WITH STANDARD QD† BUSHING SHAFT ATTACHMENT

- Constructed from high-strength cast iron
- Available with EPDM or Neoprene sleeves

### TYPE SC SPACER COUPLINGS SATISFY STANDARD SPACING REQUIREMENTS FOR PUMP APPLICATIONS

- Accommodates ANSI and ISO standard between shaft end dimensions, with custom spacer dimensions available on demand
- Features AGMA 9 balanced flanges & drop-out center for easy equipment maintenance
- Available with EPDM, Neoprene or Hytrel sleeves
- Uses H & HS shaft hubs that are bored to size for slip fit or offered with plain bore for reboring
- Shaft attachment with two setscrews at 65°
- Shaft hub flats are used for holding shafts stationary while loosening or tightening grade 8 bolts

★ Registered trademark of DuPont

† QD is a registered trademark of Emerson Electric Co.

# FEATURES/BENEFITS

## D-FLEX Couplings

### ADDED VALUE

Outside diameter concentric to bore for ease in alignment

Rounded EPDM and Neoprene element edges for full tooth engagement, even load distribution, and reduced stress build up at edges

Two setscrews at 65° on Type J flanges, Type S flanges & Type SC-H hubs for optimum shaft attachment. Holding force is 10% greater than two setscrews at 90°

Type S and SC flanges are balanced to AGMA 9 specifications for reduced vibration

ATEX Approved

- All documents and markings included with standard product

### INTERCHANGEABLE COMPONENTS MAKES INSTALLATION QUICK AND EASY

### NO LUBRICATION ASSURES TROUBLE-FREE OPERATION

- Interchangeable with other elastomeric sleeve couplings
- Slides into position for snug fit

- No metal-to-metal contact
- Provides clean, quiet, trouble-free performance

**NOTE:** All instruction manuals for D-FLEX Coupling and QD and TL Bushings available on [www.baldor.com](http://www.baldor.com)

## D-FLEX

### SPECIFICATION

D-FLEX Couplings employ a molded, non-lubricated elastomeric flexing sleeve loaded in shear. The flexible sleeve shall be of EPDM, Neoprene, or Hytrel. The compound of EPDM shall be suitable for operation in ambient temperature from -30°F to +275°F, Neoprene 0°F to +200°F, and Hytrel -65°F to +250°F. Both EPDM and Neoprene sleeves shall have torsional flexing capability of 15° and accommodate 1° of angular misalignment. Hytrel sleeves, suitable to transmit four times the power of EPDM or Neoprene, has torsional flexing capability of 7° and 1/4° of angular misalignment.

The flexible sleeve is connected with external and internal gear teeth that engage with mating teeth in each flange. The coupling assemblies have optional methods of attachment to the shaft including but not limited to: clearance fit or QD Bushings. Clearance fits are supplied with an industry standard keyway and two set screws, one over the key and one at 65°.

Spacer Couplings consist of two hubs and a center assembly consisting of two spacer spacer flanges and one flexible element. The center assembly is easily removable to facilitate maintenance on pumps or other connected equipment and must be replaceable without disturbing the coupled equipment and without realignment.

D-Flex couplings utilizing EPDM and Neoprene elements are static conductive.

### HOW TO ORDER

Standard couplings consist of:

- (2) Flange Assemblies
- (1) Flexible Sleeve

Spacer Couplings consist of:

- (2) Shaft Hubs
- (2) Spacer Flanges
- (1) Flexible Sleeve

Unless otherwise specified, all Type-J flanges are clearance fit per AGMA 9002.  
See page 101 for additional details.

Complete coupling consists of (2) J flanges, and (1) sleeve (from page PT1-39).

Unless otherwise specific, all Type-S flanges are clearance fit per AGMA 9002. See page 101 for additional details.

**\*Max bore with std. square keyway. Larger bores have rectangular keyways & keys supplied.**

† Max bore for reborable flanges.

**Complete coupling consists of (2) S flanges and (1) sleeve (from page PT1-39).**

(1) Ratings (HP/100, Torque, RPM) same as Type S. See page PT1-42.  
 (2) Check shaft hub table on next page for minimum Bore.  
 (3) B dimension included H hubs. Dimension will change if one or two HS (short hubs) are used.  
 (4) Complete coupling weight at MAX bore.

Reference Guide

Couplings

Clutches and Brakes

FLEXIDYNE

Fluid Couplings

TORQUE-TAMER

Bushings

The basic GRID-LIGN coupling consists of two steel shaft hubs, a high strength spring steel tapered grid element, two seals and a cover assembly. Misalignment and end float are accommodated by the sliding action of the grid in the lubricated hub grooves.

Standard GRID-LIGN couplings operate reliably between -22° and +215°F. They can accept angular misalignment to 1/2°, parallel misalignment to .012", and end float to .375". Speed capability goes as high as 6000 RPM.

GRID-LIGN couplings can be mounted with TAPER-LOCK bushings on shafts from 1/2" to 3-15/16". Straight bore hubs go up to 13" bore.

**Flexible Tapered Element**

- Isolates vibration, cushions shock loads
- Allows uniform contact during light, normal and shock loading conditions
- Lengthens machine life
- Constructed from tempered spring steel for long life

**High Torque Capability**

- Torque ranges from 464 to 1,650,000 in. lbs.
- Steel components allow for compact size

**Interchangeability**

- Stock GRID-LIGN coupling configurations include the standard full-flex design in vertically or horizontally split covers, half spacers and full spacers
- Interchangeable with other tapered grid style couplings

### STYLE, SIZES AND RATINGS CHART

| Coupling Styles               | Number of Sizes | Maximum Ratings |           |       |
|-------------------------------|-----------------|-----------------|-----------|-------|
|                               |                 | Bore            | Torque    | Speed |
| T10 Standard Coupling H Cover | 19              | 13.0"           | 1,650,000 | 6000  |
| T20 Standard Coupling V Cover | 10              | 5.0"            | 75,000    | 6000  |
| T31 Full Spacer               | 8               | 4.25"           | 30,000    | 3600  |
| T35 Half Spacer               | 8               | 4.25"           | 30,000    | 3600  |

#### TAPERED GRID DESIGN

- Tapered grid element, combined with the contoured hub grooves, transmit torque efficiency while accommodating misalignment and cushioning shock loads
- Grid element made from high strength steel that is quenched and tempered for long life

## GRID-LIGN

### SPECIFICATION

GRID-LIGN Couplings are tapered grid style with hubs, grids and covers which are interchangeable with other industry standard tapered grid couplings. Grid hubs are machined steel, protected with an anti-rust coating. Hubs have optional methods of attachment to the shaft including but not limited to: clearance fit, interference fit or TAPER-LOCK bushings. Clearance fits and interference fits are supplied with an industry standard keyway. Clearance fits are supplied with two set screws, one over the key and one at 65°. The grid element is made of high strength spring steel, heat treated and shot peened to enhance strength and durability.

The coupling is designed and manufactured such that the grid member can be replaced without disturbing the connected equipment and without the requirement for realignment. All Grid-Lign Couplings are fitted with covers to retain lubrication and prevent the entry of abrasives and contaminants. Covers are of a two piece design to facilitate installation and are available as axial split or radial split. DODGE will provide recommendations for types and amounts of lubricant suitable for operation in ambient temperatures from -22°F to +215°F.

Spacer Couplings consist of two shaft hubs and a center assembly consisting of two spacer hubs, one grid and cover. The center assembly is readily removable to facilitate maintenance on pumps or other connected equipment. The center assembly must be replaceable without disturbing the coupled equipment and without realignment.

**NOTE:** Instruction manuals for all Dodge products available at [www.baldor.com](http://www.baldor.com)

• Stock Sizes \*Priced on request

**Note:** For TAPER-LOCK design, TAPER-LOCK bushings must be ordered separately

**Note:** 1020T - 1090T hubs come standard as clearance fit. Interference fit available on request.

**Complete coupling consists of: (2) Hubs, TAPER-LOCK or straight bore, and (1) grid & cover assembly**

(1) Weight of T31 coupling at maximum bore

(2) Weight adder per inch

(3) Inertia of T31 coupling at maximum bore

(4) Inertia adder per inch

(5) HP/100 and TORQUE ratings for T-L style shaft hubs apply for "T" shaft hubs. See page PT1-52 for standard T-L style shaft hubs

\* For weight and inertia of T35 use 1/2 of T31 value (this page) and 1/2 T10 value (page PT1-52)

Complete spacer couplings consists of:

- T31 Spacer - (2) "T" Shaft Hubs  
(2) Spacer Hubs (Page PT1-58)  
(1) T10 Grid & Cover Assembly
- T35 Half Spacer - (1) Shaft Hub (Page PT1-49)  
(1) Spacer Hub (Page PT1-59)  
(1) "T" Shaft Hub  
(1) T10 Grid & Cover Assembly

NOTE: For TAPER-LOCK designs, TAPER-LOCK bushings must be ordered separately. Refer to bushing section PT6-16.

NOTE: 1020T - 1090T hubs come standard as clearance fit. Interference fit available on request.

# FEATURES/BENEFITS

## Gear Couplings

### The Power-Dense, High-Torque Gear Coupling

The DODGE Gear Coupling (DGF) offers unmatched performance and proven reliability

#### Quality Manufacturing

- High-quality steel
- Larger tooth profile provides additional service factor
- Good inherent balance
- Proven O-ring seal design
- Machined flanges and gasket for improved sealing
- High-grade fasteners

#### Performance Benefits

- High torque rating allows for coupling downsizing
- Versatile design permits interchangeable half couplings
- Low backlash (well suited for reversing applications)
- Crowned tooth profile for longer life and improved performance

#### DODGE Benefits

- Coupling solutions for any application
  - Choose from DODGE coupling family: Gear (DGF), PARA-FLEX, GRID-LIGN, D-FLEX, Rigid and Fluid - all available from stock
- Combine DODGE couplings with any DODGE speed reducer for unmatched performance
  - Choose from thousands of combinations to get a package tailored to meet your needs
- Years of application expertise
  - DODGE engineers can help specify products to achieve maximum results from your equipment

# FEATURES/BENEFITS

## Gear Couplings

Reliable O-ring design effectively seals against contaminants

High pressure angle provides large tooth base; results in high safety factor

Flexible, rigid hub styles available

High-quality carbon steel ensures longer service life

## Gear Couplings

### SPECIFICATION

DODGE GEAR COUPLINGS are power dense and capable of transmitting high torque at high speeds while still remaining inherently well balanced. Gear Couplings transmit torque by the mating of two hubs with external gear teeth that are joined by flanged sleeves with internal gear teeth.

Gear Couplings will be provided with interference fit bores unless otherwise specified. The hubs and sleeves will be manufactured of high quality steel.

### HOW TO ORDER

Standard couplings consist of:

- (2) Flex Hubs
- (2) Sleeves
- (1) Hardware Kit

+ Ratings are based on standard interference fit.

\* For higher RPM applications, contact DODGE Customer Order Engineering at (864) 284-5700.

\*\* Based on 1-1/2 degrees angular misalignment per gear mesh for sizes 1 through 5-1/2, 3/4 degree angular misalignment per gear mesh for sizes 6 and 7, and maximum bore. Flex-Rigid configurations do not accept parallel misalignment.

\*\*\* Approximate weight with minimum bore.

Ordering Information: Standard Gear Couplings may be orders in 3 different assemblies -

1. Flex-Flex (or Full Flex): To order a complete Flex-Flex coupling you need - (2) Flex Hubs [reborable], (2) Sleeves (includes Seal), and (1) Hardware Kit.
2. Flex-Rigid: To order a complete Flex-Rigid Coupling you need - (1) Flex Hub [reborable], (1) Sleeve (includes Seal), (1) Rigid Hub [reborable], and (1) Hardware Kit.
3. Rigid-Rigid: To order a complete Rigid-Rigid Coupling you need - (2) Rigid Hubs [reborable], and (1) Hardware Kit.

# FEATURES/BENEFITS

## Disc Couplings

The Dodge Disc coupling offers industry leading torque capacity and misalignment capability resulting in longer life and improved reliability.

Disc couplings have become the preferred design for pumping and compressor applications used in the oil and gas industry due to their high torque, speed, misalignment, and maintenance-free features. The advantages of the disc style coupling have also driven the API 610 specification, which can be met by all Dodge Disc couplings. Dodge Disc Couplings meeting API 671 requirements are available upon request.

In addition to the high torque and misalignment capabilities, the Dodge Disc coupling also provides features for customers to save money by downsizing with a large hub option, and prevent unexpected downtime costs with strobe light inspection during operation.

The Dodge Disc coupling can be specified into any API 610 or API 671 pumping application due to its wide range of capabilities, as seen in Table 1. ABB drives, ABB motors, and Baldor•Reliance motors have become the standard in the oil and gas industry due to their reliability and long life. Now oil and gas users can realize the same reliability and long life by packaging Dodge Disc Couplings, ABB or Baldor•Reliance motors, and ABB drives, into one complete pump driver system.

**Table 1 – Dodge Disc Coupling Ratings\***

| Coupling style       | Size range | Max torque* | Power per 100 RPM* | Max speed*     | Max bore | Misalignment capability (Angular) | Misalignment capability (Parallel) | Misalignment capability (End-Float) |
|----------------------|------------|-------------|--------------------|----------------|----------|-----------------------------------|------------------------------------|-------------------------------------|
|                      |            | In-lbs      | HP/100             |                | Inch     |                                   | Inch                               | Inch                                |

## Disc Couplings

### Oil and Gas Industry Focus

#### API 610 Design

The Oil and Gas industry recognizes the importance of reliability and uptime by specifying products that reduce maintenance requirements, increase productivity, and prevent unexpected downtime. As a result, the American Petroleum Institute developed the API 610 specification as the standard for pumping applications across the industry.

All Dodge Disc Couplings can meet the API 610 specification, which includes:

- The spacer center assembly must be positively retained if the flexible element ruptures. As seen in Figure 1, the pilot machined in the disc coupling shaft hub positively retains the spacer center assembly, preventing the spacer center assembly from rotating free if a catastrophic bolt failure were to occur during operation.
- Coupling must be capable of rotating at 3800 rpm. All Dodge Disc Couplings are capable of operation at 3800 rpm.
- Flexible element should be made of corrosion resistant material. The Dodge Disc Coupling design utilizes flexible discs made of corrosion 301 stainless steel.
- Coupling hubs are made of 1045 steel.
- Coupling hubs are manufactured in accordance with AGMA 9000 Class 9 balance specifications.
- Spacer center assembly is removable without disturbing connected equipment.

In addition to meeting API 610 specification requirements, the Dodge Disc Coupling is also capable of meeting API 671 requirements upon request.

## Disc Couplings

### Longer Life, Improved Reliability

#### Competitor Disc Geometry

Many disc coupling competitors utilize the disc geometry seen below, featuring a scalloped outside diameter and circular inside diameter. As seen in Figure 2, this single scalloped design unevenly distributes material along the “axis of bolt center”, which negatively impacts the torque ratings and the misalignment capability of the coupling. Figure 2 shows large peak stress areas (as indicated) are created around the bolt holes and along the outside diameter of each leg between bolts, resulting in lower torque ratings. Additionally, the uneven distribution of material along the “axis of bolt center” drastically reduces misalignment capability during operation.

**Figure 2: Competitor Disc Geometry - Single Scalloped Design**

#### Dodge Disc Geometry

The Dodge Disc coupling utilizes the newest generation of disc geometry, a dual scalloped design, which offers an even distribution of material along the “axis of bolt center”. Figure 3 shows a drastically reduced number of high stress areas within the disc limited to only a small area around the bolt hole. Also, the peak stress shown in the Dodge Disc geometry is 13% less than the competitor’s geometry, resulting in an average of double the torque capacity. Additionally, an even distribution of material along the “axis of bolt center” maximizes misalignment capability and offers up to three times the misalignment of the leading competitor. Industry leading torque ratings and misalignment capability will ultimately lead to longer coupling life, improved reliability, and reduced unexpected downtime.

**Figure 3: Dodge Disc Geometry - Dual Scalloped Design**

## FEATURES/BENEFITS

### Disc Couplings

#### Longer Life, Improved Reliability

##### *Unitized Assembly Design*

All Dodge Disc coupling spacer center assemblies are factory assembled and include a spacer, two disc packs, and two guard rings. Pre-assembling the spacer center assembly not only ensures that the system is assembled with the required tolerances, but also allows the customer to order a single part number and receive a single unit. Utilizing a custom, tight tolerance bushing and bolt to connect the spacer, disc pack, and guard ring, results in torque being transmitted through the entire assembly. The unitized assembly or “column” effect, which can be seen in Figure 4 below, prevents any single component from transmitting the application torque alone. Competitive designs that offer loose discs for assembly risk improper installation which can cause the bolt to quickly shear. The unitized assembly is just another reason why Dodge Disc couplings can offer users higher torque ratings, increased misalignment capability, and longer life.

**Figure 4: Unitized Assembly Column Effect**

# FEATURES/BENEFITS

## Disc Couplings

### Increased Productivity

#### Maintenance Free

The Dodge Disc coupling offers the power density, large bore capacity, and high speed capabilities of a metallic coupling while eliminating the need for maintenance. Traditional gear and grid style couplings require additional grease multiple times per year in order to lubricate gear teeth and looping segments. However, the Dodge Disc coupling does not have relative movement between mating parts which allows for increased maintenance productivity. Additionally, by not having any moving components, the Dodge Disc coupling is torsionally rigid, prevents backlash, and is perfect for applications needing precise positioning such as paper machines.

When comparing a metallic coupling that requires maintenance with an elastomeric, maintenance free design, the customer must sacrifice space since the maintenance free option would be much larger than the metallic design. However, Table 2 lists three common application examples driven by NEMA and IEC motors. Table 3 reveals that the Dodge Disc coupling selection has a smaller outside diameter than the grid and gear selection. Additionally, the Dodge Disc coupling selection has equal angular misalignment to the gear and more than the grid.

**Table 3 shows that the maintenance-free Dodge Disc Coupling offers comparable size and angular misalignment capability as other metallic coupling designs requiring maintenance.**

**Table 2: Application Details for Metallic Coupling Comparison**

|                  | Application 1 |         | Application 2 |           | Application 3 |           |

## FEATURES/BENEFITS

### Disc Couplings

#### Lower Costs, Reduce Unexpected Downtime

##### *Downsizing Capability*

Many disc coupling competitors utilize the disc geometry seen below which features a scalloped outside diameter and circular inside diameter. As seen in Figure 2, this single scalloped design unevenly distributes material along the “axis of bolt center”, which negatively impacts the torque ratings and the misalignment capability of the coupling. Figure 2 shows large peak stress areas are created around the bolt holes and along the outside diameter of each leg between bolts, resulting in lower torque ratings. Additionally, the uneven distribution of material along the “axis of bolt center” drastically reduces misalignment capability during operation.

**Figure 5: Large Hub Configurations**

size 115 with  
two large hubs

Dodge Disc Coupling  
size 115 with one large hub  
and one standard hub

#### Reduce Unexpected Downtime with Strobe Light Inspection

The Dodge Disc coupling has the ability to be inspected during operation. By observing the disc pack under a strobe light during operation, users can diagnose potential application issues before they experience costly, unexpected downtime. Cracks in the discs clearly communicate to the user that the driver and driven shafts are severely misaligned. Also, an “S” condition, the buckling of a disc leg between the driver and driven connecting bolts, tells the user the application is experiencing a torque overload situation. With this information, modifications can be made to the application to extend the life of the coupling or the spacer center assembly can be changed out, depending on the severity of the deformation. The ability to perform predictive maintenance during operation will greatly reduce plant costs by eliminating unexpected downtime associated with couplings.

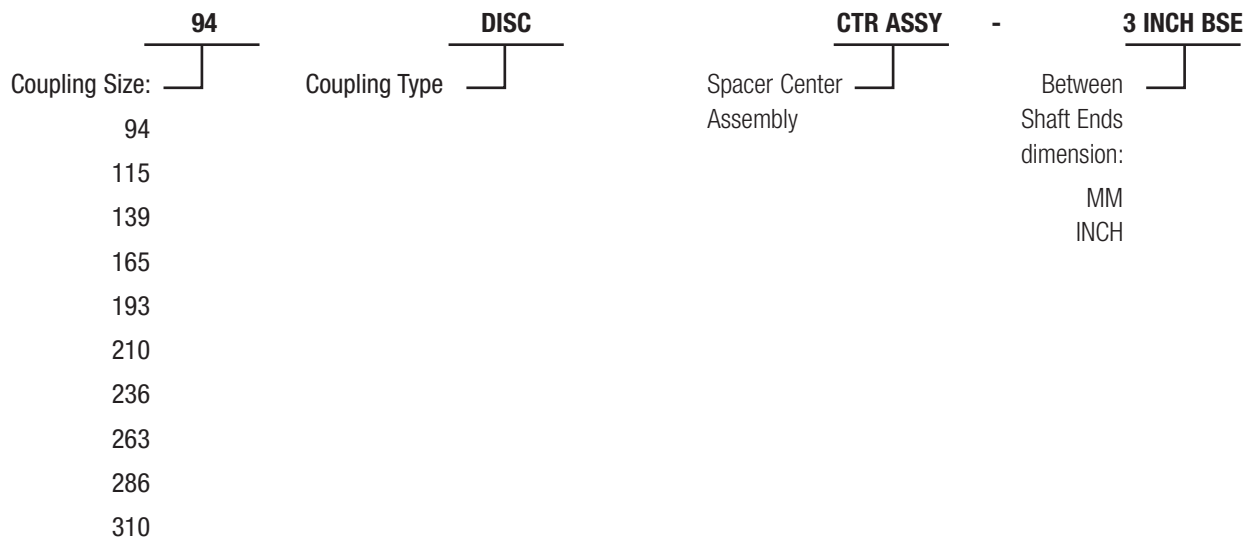

## Disc Couplings

Complete Dodge Disc Coupling Consists of:  
 Quantity two hubs (standard or large) and quantity one spacer center assembly

## Notes:

- (1) Coupling operational speed must be equal to or less than the allowable speed that is limited by the weight and critical speed of the spacer.
- (2) Standard Dodge Disc couplings will meet the maximum speed listed in the "Standard" column. Speed capabilities listed in the "Balanced" column require special balancing by Dodge.
- (3) Weight of complete coupling at maximum bores.
- (4) Axial misalignment for two disc packs.
- (5) Angular misalignment for one disc pack.
- (6) Anti-corrosive options including Black Oxide, Zinc or Manganese Phosphating, Electroless Nickel, and Stainless Steel are available upon request.
- (7) Standard BSE's are listed on page 9

## Disc Couplings

### Dodge Disc Coupling Inch and Metric Spacer Center Assembly Part Numbers

Complete Dodge Disc Coupling Consists of:

## Disc Couplings

### Dodge Disc Coupling Inch Bore Hub Part Numbers

Complete Dodge Disc Coupling Consists of:  
Quantity two hubs (standard or large) and quantity one spacer center assembly

| Size<br>Inch Bore<br>(in) | 210          |           | 236          |           | 263          |           | 286          |           | 310          |           |

## Disc Couplings

### Dodge Disc Coupling Metric Bore Hub Part Numbers

Complete Dodge Disc Coupling Consists of:  
Quantity two hubs (standard or large) and quantity one spacer center assembly

## Disc Couplings

### Dodge Disc Coupling Metric Bore Hub Part Numbers

Complete Dodge Disc Coupling Consists of:  
 Quantity two hubs (standard or large) and quantity one spacer center assembly

| Size Metric Bore (mm) | 236          |           | 263          |           | 286          |           | 310          |           |
|-----------------------|--------------|-----------|--------------|-----------|--------------|-----------|--------------|-----------|
|                       | Standard Hub | Large Hub | Standard Hub | Large Hub | Standard Hub | Large Hub | Standard Hub | Large Hub |

# NEW PRODUCT

## DODGE Moment Couplings

DODGE Moment Couplings are specifically designed to make the rigid connection between the output shaft of a gearbox and an overhung driven load, commonly a head pulley. Highly engineered to meet the most rigorous application requirements, these couplings are capable of handling both the required application torque and the bending moment forces of the suspended weight of a drive package, including the gearbox, motor, high-speed coupling, and swing base.

Moment Coupling hubs are designed to maximize the bore range of the driver and driven shafts. The male and female hubs are manufactured from 4140 alloy steel and are assembled with Grade 8 bolts. Suitable for a wide range of applications, DODGE Moment Couplings span a torque range of 100,000 to 920,000 inch-pounds and may be used in DODGE MagnaGear packages and in other operations.

### Information needed from the customer for DODGE engineering to select the appropriate Moment Coupling for an application:

- Horse Power / Torque / Speed Requirements
- Driver and Driven Shaft Sizes
- Overhung Load
- Length of Lever Arm
- Application Specifics: Type of Operation; Required Stops and Starts; Shock Loads and Vibration

**For more information on Couplings contact your authorized DODGE distributor or log onto [www.baldor.com](http://www.baldor.com).**

# FEATURES/BENEFITS

## Chain Couplings

DODGE Chain Couplings offer a simple, widely accepted and inexpensive way to couple two shafts. They are interchangeable with industry standard dimensions. DODGE Chain Couplings can be provided with TAPER-LOCK bushed hubs, finished bore or reboreable flanges. Chain coupling covers and chain assemblies are also available from stock.

### Low Operating Cost

- Long service life
- Inexpensive initial investment
- Economical replacement costs

### Broad Product Line

- Six popular TAPER-LOCK coupling sizes
- Eleven popular straight bore sizes
- Stocked covers available for higher speeds

### Shaft Attachment Flexibility

- TAPER-LOCK bushings
- Slip fit with setscrews
- Interference fit

### High Torque Capability

- Hardened tooth sprockets
- ANSI standard double width roller chain

### Compact Design

- All metallic components
- Excellent torque to bore compatibility

**NOTE:** Instruction manual for Chain Couplings and TAPER-LOCK Bushings available on [www.baldor.com](http://www.baldor.com)

## Chain Couplings

### SPECIFICATION

Chain Couplings transmit torque through two hubs with hardened sprocket teeth and a double width roller chain. The chain is wrapped around the sprocket and connected with a link or pin for easy installation or removal. The Chain Coupling allows for misalignment through the clearances between chain and sprocket teeth. The coupling allows 2° angular misalignment, .015" parallel misalignment and up to .300" shaft end float. The temperature range is -30°F to +225°F.

The coupling hubs have optional methods of attachment to the shaft including but not limited to: clearance fit, interference fit or TAPER-LOCK bushings. Clearance fits and interference fits are supplied with an industry standard keyway. Clearance fits are supplied with one set screw over the keyway.

Aluminum covers with elastomeric seals contain lubricant and protect the chain and teeth in an abrasive or corrosive atmosphere.

### HOW TO ORDER

Standard couplings consist of:

- (2) Flanges
- (1) Chain Assembly
- (1) Cover (check RPM requirements on page PT1-68)

### NOMENCLATURE

FB = Finished Bore

B = Reborable

Blank = TAPER-LOCK

Chain Size

Number of Teeth

• Stock Sizes

Complete coupling consists of:

- (2) Hubs, TAPER-LOCK, straight bore, or reborable
- (1) Chain Assembly
- (1) Cover Assembly (if required)

**NOTE:** For TAPER-LOCK designs, TAPER-LOCK bushings must be ordered separately

## SELECTION/DIMENSIONS

### Chain Couplings

#### CHAIN COUPLING COVERS

Chain coupling covers are recommended for use when couplings are operating under abrasive or moist conditions, or when coupling speeds exceed the RPM listed in the table below.

Cover should be filled with a roller bearing grease of soft or medium consistency. This provides excellent lubrication and substantially increases coupling life.

#### Chain Coupling Cover Recommendation

| Coupling Size | Cover required when Coupling RPM exceeds this figure |
|---------------|--|
| 4012          | 875  |
| 4016          | 875  |
| 5016          | 800  |
| 5018          | 800  |
| 6018          | 675  |
| 6020          | 675  |
| 8018          | 500  |
| 8020          | 500  |
| 10020         | 450  |
| 12020         | 400  |

#### Chain Coupling Cover Assemblies ▲

| For Coupling Size | Cover Size | Part No. | Wt. (lbs.) | A     | B    |
|-------------------|------------|----------|------------|-------|------|
| 4012              | 40         | 099026   | 1.0        | 4.00  | 2.00 |
| 4016              | 40         | 099026   | 1.0        | 4.00  | 2.00 |
| 5016              | 50         | 099027   | 1.3        | 5.13  | 2.38 |
| 5018              | 50         | 099027   | 1.3        | 5.13  | 2.38 |
| 6018              | 60         | 099028   | 2.6        | 6.38  | 2.94 |
| 6020              | 60         | 099028   | 2.6        | 6.38  | 2.94 |
| 8018              | 80         | 099029   | 5.1        | 8.19  | 4.00 |
| 8020              | 80         | 099029   | 5.1        | 8.19  | 4.00 |
| 10020             | 100        | 099024   | 12.2       | 10.13 | 5.25 |
| 12020             | 120        | 099025   | 19.5       | 12.25 | 6.13 |

▲ Consists of (2) cover halves and screws; (4) seals for cover sizes 4012/4016 thru 8012/8020; (2) seals for cover sizes 10020 and 12020; and (2) cover gaskets.

## POLY-DISC

### SPECIFICATION

POLY-DISC Couplings are a pin type coupling using a molded polyurethane disc. The physical properties of the disc allow for the cushioning of shock loads and the resistance to most common chemicals such as acids, alkalis and petroleum products. The disc has an operating range of -90°F to +170°F.

The flexible disc is captured through metallic pins, utilizing a light press fit over the pins to prevent the accumulation of abrasive particles between the disc and pins. The pin holes are barreled to allow 2° angular misalignment and the flexible disc allows 1/32" parallel misalignment. The disc has spacer buttons to achieve automatic flange spacing which speeds up installation. Both flanges are machined all over and are taper bored to receive TAPER-LOCK bushings to permit quick and easy installation and removal on shafts of equal or different diameters.

### HOW TO ORDER

Consists of:

- (2) TAPER-LOCK Flanges
- (2) TAPER-LOCK Bushings
- (1) POLY-DISC Element

### NOMENCLATURE

## RIGID COUPLINGS

### TAPER-LOCK Rigid

#### TAPER-LOCK RIGID SPECIFICATION

Rigid Couplings provide a connection between two perfectly aligned shafts. Flanged Rigid Couplings consist of two flanges joined by bolts and are taper bored for TAPER-LOCK bushings to connect shafts of the same or different diameters.

#### HOW TO ORDER

TAPER-LOCK consist of:  
(1) Male Flange Assembly  
(1) Female Flange

#### NOMENCLATURE

\* Space required to tighten bushing with shortened hex key in bushings 1615 through 5050. 6050 uses standard wrench. Also space required to loosen screws to permit removal of hub by a puller

† Space required to loosen bushing using screws as jack screws-no puller required. Use shortened hex key for bushing 1615 through 5050. 6050 uses standard wrench

\*\* Ratings are based on uniform, non-reversing type loads. For more severe conditions, consult DODGE

Complete coupling consists of:

- (1) Male Flange Assembly
- (1) Female Flange
- (2) TL Bushings

\* Stainless Steel TL Rigid couplings include zinc coated hardware.

Hardware supplied with male flange

Available in reverse mount

NOTE: TAPER-LOCK bushings ordered separately.

Refer to bushing section PT6-16

TL Rigid couplings are capable of accommodating keyless locking devices for use with non-keyed shafting. Please contact DODGE for further details.

NOTE: Instruction manuals for TAPER-LOCK Rigid Couplings and TAPER-LOCK Bushings available on [www.baldor.com](http://www.baldor.com)

## Rigid Couplings

### RIBBED RIGID

#### RIBBED RIGID SPECIFICATION

Rigid Couplings provide a connection between two perfectly aligned shafts. Ribbed Rigid Couplings are axially split to clamp on shafts of the same diameter and held together by bolts. The coupling uses one key over the entire length and permits quick and easy installation and removal.

#### HOW TO ORDER

TAPER-LOCK consist of:  
(1) Ribbed Rigid Coupling Assembly  
(Complete, by bore size)

#### NOMENCLATURE

Ribbed Rigid 2-3/4  
Bore Size of Coupling

# SELECTION/DIMENSIONS

## Ribbed Rigid

circa 1905

Figure 1

Today's Ribbed Rigid Coupling

**“Grim Death” Compression Coupling** as presented in the 1905 Dodge Catalog, is an original Dodge design. “Grim Death” is a substantial safety coupling adapted to any class of service, and complies with all legal requirements as to safety by having bolt heads and nuts protected. “Grim Death” coupling is finished and polished on periphery and faced on ends.

(1) Cover assemblies consist of cover halves, screws, seals, and cover gaskets.

## PARA-FLEX Nickel Plated Screws

| Flange Assembly Size | Screw Size (2) | Part Number | Number per Flange (3) |
|----------------------|----------------|-------------|-----------------------|
| PX70, PX80           | 5/16-18X1-1/2  | 411767      | 5, 6                  |
| PX90, PX100          | 3/8-16X1-3/4   | 411768      | 6                     |
| PX120                | 1/2-13X2       | 411770      | 6                     |
| PX140                | 1/2-13X2-1/4   | 411771      | 8                     |

(2) Nickel plated Grade 8 hex head cap screws. Screws not available from stock for PX140 with iron flanges. For sizes not listed, contact DODGE.

(3) 5 required for PX70; 6 for PX80.

**NOTE:** Product installation and maintenance instructions can be found at [www.baldor.com](http://www.baldor.com)

## Selection Methods:

### D-FLEX, PARA-FLEX, GRID-LIGN, GEAR, POWER-PLUS, POLY-DISC, & RIGID COUPLINGS

#### HP/100 METHOD

**Step 1:** Obtain required service factor from Service Factor Tables on pages PT1-83 and PT1-84.

**Step 2:** Determine the application HP per 100 RPM:

$$HP / 100 \text{ RPM} = \frac{\text{Motor HP} \times 100 \times \text{Service Factor}}{\text{Coupling RPM}}$$

**Step 3:** From Rating Tables, find a rating equal to or greater than the HP/100 RPM. Note coupling size from left hand column.

**Step 4:** Check maximum RPM capability.

**Step 5:** Check maximum bore capacity. If maximum bore is exceeded, move to larger size with adequate bore-but be sure maximum RPM of coupling is not exceeded

**Step 6:** If the GT Adapter System is utilized then ensure the keyless torsional holding power exceeds the application demands. From the application tables listed on PT1-10 and PT1-11, ensure the **Maximum Adapter Torque** for the shaft size exceeds the application torque that was calculated in Step 2.

#### TORQUE METHOD:

**Step 1:** Obtain required service factor from Service Factor Tables on pages PT1-83 and PT1-84

**Step 2:** Determine torque required for application.

$$\text{Torque (In - lbs)} = \frac{63025 \times \text{HP} \times \text{SF}}{\text{Coupling RPM}}$$

**Step 3:** From Rating Tables, find a rating equal to or greater than the torque. Note coupling size from left hand column.

**Step 4:** Check maximum RPM capability

**Step 5:** Check maximum bore capacity. If maximum bore is exceeded, move to larger size with adequate bore-but be sure maximum RPM of coupling is not exceeded

### CHAIN COUPLINGS

#### DESIGN HP METHOD:

**Step1:** Obtain required service factor from Service Factory Tables on pages PT1-84 and PT1-85

**Step 2:** Determine application HP:  
HP Design = HP x SF

**Step 3:** From rating tables, select appropriate coupling RPM column and find a rating equal to or greater than HP design. Note coupling size from left hand column.

**Step 4:** Check maximum RPM capability

**Step 5:** Check maximum bore capacity. If maximum bore is exceeded, move to larger size with adequate bore-but be sure maximum RPM of coupling is not exceeded.

**NOTE:** If spring set motor brake is used, and brake HP is greater than prime mover, use brake HP in place of motor HP.

**NOTE:** If system peak torque is known and is non-reversing, start at Step 3. If system peak torque is known and reversing, multiply by 2.0 and start at Step 3

**NOTE:** Selection program "Couple" available on [www.ptwizard.com](http://www.ptwizard.com)

## SERVICE FACTOR

Table 1

| Application<br>(Read Footnotes)                            | Factor Δ                |                  |        |      |            |

### SYSTEM SERVICE FACTOR CALCULATION

To determine the system service factor, the driver service factor adder (Table 1A) must be added to the driven service factor. (Table 1) Example: Determine the system service factor for a PARA-FLEX coupling used to couple a barking drum and a six-cylinder diesel engine.

$$\text{Driven S.F.} + \text{Driver S.F. Adder} = \text{System S.F.}$$

$$2.5 + .5 = 3.0$$

Δ The service factors listed are intended only as a general guide. Where substantial shock occurs or starting and stopping is frequent as on some "inching" drives and on some reversing drives or where the power source is an internal combustion engine with less

than four cylinders—Consult DODGE. Where torsional vibrations occur as in, for example, internal combustion engine or reciprocating compressor or pump applications, check the coupling stiffness for the possible development of damaging large-amplitude vibrations. A complete system torsional analysis may be necessary.

\*\* Add 0.5 to factor if without flywheel

◆ CONSULT DODGE FOR SELECTION ASSISTANCE

Table 1A-Driver Service Factor Adders

| Type of Coupling | Electric Motor Std. Torque | High Torque Motors                                  | Turbines  | Reciprocating Engine Number of Cylinders          |         |        |        |             |
|------------------|----------------------------|---|---|---|---------|--------|--------|-------------|

**NOTE:** (1) All dimensions are in inches

(2) Values are for when 1/4 or more of the rated torque is transmitted.  
Reduce values by 50% for lower torques

(3) Increase E dimension by this amount to accommodate end float.

(4) Types H & HS should not be used as direct replacements for EPDM or Neoprene sleeves

## PARA-FLEX Couplings Bolt Torque Information

## FEATURES/BENEFITS

### Motor Brakes

1. Rugged, die-cast aluminum housing mounts at any angle without modification.
2. Internally rectified DC voltage coil operates on either AC or DC voltage. Class B insulation is standard.
3. Splined hub permits uniform load distribution. Integral key design simplifies installation - no loose parts.
4. Single, non-asbestos friction disc design extends life, reduces replacement parts and allows quiet operation (1)
5. Wave spring provides 360° of force when power is removed from the brake.
6. Industry standard NEMA C-face mounting. Interchanges easily with competitive units.
7. Easy-to-use, reliable manual release levers reset automatically.

- (1) 35 & 50 ft. lb. motor brakes employ two friction discs and can be mounted at any angle without modification

## Motor Brakes

### SPECIFICATION

D-Series Motor Brakes are designed with a single\* non-asbestos friction disc for fewer adjustments, reduced replacement parts, and extended life. They are released when power is applied to the brake coil. The friction disc hub assembly and ultimately the load are free to turn. However, when power is taken away, intentionally or accidentally, an internal wave spring clamps the friction disc to stop and hold the load. The single\* disc design has significantly fewer parts than competitive brakes and provides a dramatic improvement in brake friction disc life. Just as dramatic is the quiet operation compared to solenoid type brakes. DODGE D-Series motor brakes are available as stock off-the-shelf units in 2 configurations. DBSC C-Face brakes mount on the fan end (non-driving end) of a motor. DBSS double C-Face brakes are generally used as a coupler between standard C-Face motors and C-Face gear reducers.

\* 35/50 ft.-lb motor brakes employ two friction discs

### HOW TO ORDER

Motor Brakes are ordered by specifying the unit size, the motor frame size, and the voltage. Part numbers are found on the selection pages for each type of unit. Refer to the part number when ordering.

# SELECTION/DIMENSIONS

## Motor Brakes

### Selection Procedure

1. Determine the motor frame size, horsepower and speed.
2. Use chart for brake static torque selection. Note that chart selections are based on a **1.4 service factor** and increased to the next highest standard brake torque rating. To select a brake using a different service factor, use the formula below to determine the required brake static torque.

$$T = \frac{HP \times 5252 \times SF}{RPM}$$

**T = Brake Static Torque (Ft-Lbs)**

**HP = Motor Horsepower**

**SF = Service Factor Desired**

**RPM = Motor Speed**

Once your torque requirement has been determined, select a brake with at least that capacity.

3. Consult Part Number charts on pages PT2-5 thru PT2-10 for appropriate part number. Brake voltage should be matched with motor voltage rating.
4. Verify mounting dimensions (C-face tenon, mounting bolt pattern, shaft size, etc.) from pages PT2-5 thru PT2-10.
5. In positioning applications, use of a fast response kit allows you to obtain faster stop times. To order see page PT2-10.
6. In positioning applications, use 2.0 SF

**Note:** DODGE D Series brakes are intended as holding brakes. Contact application engineering with inertia and application information for cycle rates exceeding 6 per minute.

### Brake Static Torque Ratings\* (Ft.-Lbs)

| Motor HP | Motor Speed (RPM) |     |      |      |      |      |      |      |

#### NOTES:

Coil will operate at the following voltages:

- (1) 115/208-230 VAC 50 or 60 Hz, 133/265 VAC 60 Hz, 110-125 VDC
- (2) 208-230/460 VAC 50 or 60 Hz, 240/480 VAC 60 Hz, 220/440 VAC 50 Hz, 230 VDC

- (3) 287/575 VAC 60 Hz, 300/600 VAC 60 Hz
- (4) 104/208 VAC 50 or 60 Hz, 100/200 VAC 60 Hz, 90-95 VDC
- (5) 190/380 VAC 50 Hz, 200/400 VAC 60 Hz, 206/416 VAC 50 Hz

### NOTES:

Coil will operate at the following voltages:

(1) 115/208-230 VAC 50 or 60 Hz, 133/265 VAC 60 Hz, 110-125 VDC

(2) 208-230/460 VAC 50 or 60 Hz, 240/480 VAC 60 Hz, 220/440 VAC 50 Hz, 230 VDC

(3) 287/575 VAC 60 Hz, 300/600 VAC 60 Hz

(4) 104/208 VAC 50 or 60 Hz, 100/200 VAC 60 Hz, 90-95 VDC

(5) 190/380 VAC 50 Hz, 200/400 VAC 60 Hz, 206/416 VAC 50 Hz

## Motor Brakes

### Fast Response Kits

In positioning applications, use of a fast response kit allows you to obtain stop times equivalent to AC voltage brakes while continuing to get all of the benefits associated with DC voltage brakes:

- Low power draw = less energy consumption
- Constant current creates smooth operation
- Lower coil temperature during cycling applications
- Quieter operation

The kit has two wiring configurations:

- Wired to brake and motor
- Wired to brake and isolated AC line

### Part Number

| Description                   | Part Number |
|-------------------------------|-------------|
| Fast Response Kit 115/230V    | 031386      |
| Fast Response Kit 230/460V    | 031389      |
| FRK w/ Conduit Cover 115/230V | 031424      |
| FRK w/ Conduit Cover 230/460V | 031425      |
| Fast Response Kit 190/380V    | 032552      |
| Fast Response Kit 287/575V    | 032525      |
| Fast Response Kit 575V        | 032531      |

### Replacement Rectifier Kit

DODGE D-Series Motor Brakes come with an internal rectifier allowing operation on either AC or DC voltage. A “one size fits all” replacement rectifier is available, in the event a new rectifier is needed. The kit wires external to the brake housing.

### Part Number

| Description                     | Part Number |
|---------------------------------|-------------|
| DBSC/DBSS Replacement Rectifier | 024018      |

## FEATURES/BENEFITS

### Clutch/Brakes Modules

1. Conforms to UL and C-UL requirements.
2. One-piece, die-cast housing simplifies mounting. Housing is finned for maximum heat dissipation.
3. Pre-lubricated and sealed ball bearings have higher B10 life rating than competitive modules.
4. High torque, non-asbestos friction material assures long life and environmental safety.
5. Armatures incorporate a high impact, high temp molded spline for heavy torque and high cycle capabilities. (Patent # 4,760,898)
6. DYNA-GAP automatic air gap mechanism automatically compensates for friction surface wear.
7. Modules are factory assembled, adjusted and burnished for easy installation and out-of-the-box operation.
8. Rotor incorporates ball bearing and Driv-Lok key for foolproof installation.
9. Standard NEMA C-face and Base Mounted, Shaft-in/ Shaft-out mounting configurations.

## CLUTCH/BRAKE MODULES

### SPECIFICATION

Clutch/Brake Modules mount directly to NEMA C-face motors and reducers or can be used with separate base mount frames. These modules are completely factory assembled, tested, and pre-burnished for easy installation and long maintenance free operation. The units are designed with large ball-bearings to provide greater over-hung load capacity and longer life. They use larger armatures for high torque transmission.

### HOW TO ORDER

Clutch/Brake Modules are ordered by specifying the type of unit, size and voltage. Part numbers are found on the selection pages for each type of unit. Refer to the part number when ordering.

## Clutch/Brake Modules SELECTION

### DMC Selection by NEMA Frame Size

| Frame Size  | Module Size   |
|-------------|---------------|
| 56C         | DMC-50, 100 ◆ |
| 143TC/145TC | DMC-180       |
| 182TC/184TC | DMC-210       |
| 213TC/215TC | DMC-256       |

◆ DMC 100 module has rating of 180 module with 56C (5/8") shafts

### Selection Procedure

- (1) Determine the frame size, horsepower and speed at the module location (motor speed for DMC Series).
- (2) Choose proper module size based on motor frame size for DMC Series or motor HP and operating speed for DMS Series.
- (3) Check to ensure the max allowable cycles per minute rating is not exceeded by consulting charts in the engineering/technical section. Consult DODGE Engineering when allowable cycle rate is exceeded.

### DMS Series Selection

| HP    | Shaft Speed at Module (RPM) |     |     |     |     |     |     |     |     |      |      |      |      |      |      |      |      |      |     |
|-------|-----------------------------|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|------|------|------|------|-----|

**NOTE:** 256 modules may be selected as an alternate to the 210 size. Check shaft diameter for proper drive components

# SELECTION/DIMENSIONS

## Clutch/Brake Modules

### DMCCB & DMCCO

DMCCB modules are ideal for rapid cycling applications. They can be mounted directly between a C-face motor and reducer. Five standard sizes are available in 90, 24 or 6 VDC input voltage. The brake is power on. The DMCCO mounts and operates in a manner similar to DMCCB, but as a clutch only. The clutch ratings and external dimensions of both units are the same and are completely factory preassembled, adjusted, burnished and dynamically tested.

# SELECTION/DIMENSIONS

## Clutch/Brake Modules

**DMCBO**

**DMCBX**

The DMCBO mounts and operates in a manner similar to DMCCB, but as a power-on brake only. Brake ratings are the same as the DMCCB. Dimensionally, the DMCBO is shorter axially from C-face to output shaft. The DMCBX power-on brake is designed to be mounted on a double shafted C-face motor. It is shorter axially than comparable power-off brakes and provides the advantages of C-face mounting in space restricted applications. Sizes and ratings are the same as the DMCBO brakes.

## Clutch/Brake Modules

### DMSCB & DMSCO

The DMSCB clutch/brake module is rated identically to the C-face version, but is mounted on a base with standard shaft input and output. It can be direct coupled or linked by belt drive to motor and driven equipment. The DMSCO mounts and operates in a manner similar to the DMSCB, but as a clutch only. Clutch ratings and dimensions of both units are identical.

## FEATURES/BENEFITS

### Shaft Mounted Clutches & Brakes

#### IEC SERIES - Shaft Mounted Clutches

DODGE IEC Electric Clutches are engineered to mount on standard motor shafts or thru shafts. These clutches are designed to accept standard sheaves, sprockets & gears. The product features include:

- **Mounting Flexibility**-Offered in bore sizes from 1/2" to 1-3/8"
- **Torque Range**-Rating from 22 lb-ft. to 175 lb-ft. handling from 1/50 to 7-1/2 HP @ 1800 RPM. Units are pre-burnished at the factory.
- **Easy Installation**-Sheaves, sprockets, gears or other standard power transmission components mount directly to the clutch hub.
- **Conduit Box** meets Industry Standards-C-UL-UL.
- **Long Life**-Minimal Maintenance-Integral splined armature and fan designed for maximum cooling.
- **DYNA-GAP**-Automatic Wear Compensation.
- **Maintenance**- Friction surfaces easily replaced.

#### IEB SERIES - Shaft Mounted Power-On Brakes

DODGE IEB Electric Brakes are engineered to mount on standard motor shafts or thru shafts.

- **Mounting Flexibility**-Offered in bore sizes from 1/2" to 1-11/16"
- **Torque Range**-Rating from 22 lb-ft. to 175 lb-ft. handling from 3/4 to 20 HP @1800 RPM. Units are pre-assembled at the factory.
- **Conduit Box** meets Industry Standards-C-UL-UL.
- **Long Life**-Minimal Maintenance-Integral splined armature and fan designed for maximum cooling.
- **DYNA-GAP**-Automatic Wear Compensation

#### IPB SERIES - Flange Mounted Brakes

DODGE IPB Electric Brakes are equipped with flange for ease of mounting to any suitable mounting surface.

- **Mounting Flexibility**-Offered in bore sizes from 1/2" to 1-3/8"
- **Torque Range**-Rating from 22 lb-ft. to 100 lb-ft. handling from 3/4 HP to 10 HP@ 1800 RPM.
- **Conduit Box** meets Industry Standards-CUL-UL.
- **Long Life**-Minimal maintenance-Integral splined armature and fan designed for maximum cooling.
- **DYNA-GAP**-Automatic wear compensation.

## Shaft Mounted Clutches & Brakes

### SPECIFICATION

The Shaft Mounted Series of Clutches and Brakes are factory assembled, tested, and pre-burnished. They are engineered and ready to mount on standard motor shafts or thru shafts. The IPB brake is flange mounted on a bulkhead, suitable frame, or on the motor. They are long life and minimal maintenance with an integral splined armature with fan designed for maximum cooling.

### HOW TO ORDER

Shaft Mounted Clutches & Brakes are ordered by specifying the unit size, bore size (or bushing size if Taper-Lock), and voltage. Part numbers are found on the selection pages for each type of unit. Refer to the part number when ordering.

### NOMENCLATURE

# SPECIFICATION/HOW TO ORDER/NOMENCLATURE

## Shaft Mounted Clutches & Brakes

1. Determine the horsepower and the speed at the clutch or brake.
2. Choose proper size based on motor HP and operating speed.
3. Check to ensure the maximum allowable cycles per minute rating is not exceeded by consulting the charts in the Engineering/Technical section.

## Shaft Mounted Clutches & Brakes

### IEC SERIES

IEC Series Shaft Mounted Clutches are factory assembled, tested, preburnished and ready to mount on standard motor shafts. Sheaves, sprockets, gears or other power transmission components can be mounted directly on the clutch hub extension with standard DODGE TAPER-LOCK® bushings.

## Shaft Mounted Clutches & Brakes

**IEB SERIES**

IEB Series Shaft Mounted Power-On Brakes offer a wide selection of bore sizes with the use of the DODGE TAPER-LOCK bushings. The anti-rotation torque arm can be mounted in any location around the shaft for further application flexibility.

SIZES 375, 475

SIZES 650, 825

## Shaft Mounted Clutches & Brakes

### IPB SERIES

IPB Series Flange Mounted Power-On Brakes operate similar to the FB Series brake. The brake magnet/flange can be mounted to any suitable mounting surface. Armature mounts to load shaft using DODGE TAPER-LOCK bushings.

| Unit    | Voltage Size | Bore Size |        |        |        | TAPER-LOCK           |

**FSB**

- Flange Mounted
- Engages When Voltage Is Removed
- 7 Sizes For Shaft Diameters 3/16"-3/4"
- Non-Asbestos, Non-Lead Friction Material For Long-Life And Quiet Operation

**FSBR**

- Designed For Applications Requiring Minimal Space
- 5 Sizes For Shaft Diameters 5/16"-3/4"
- Non-Asbestos, Non-Lead Friction Material For Long-Life And Quiet Operation

## Fractional HP Clutches & Brakes

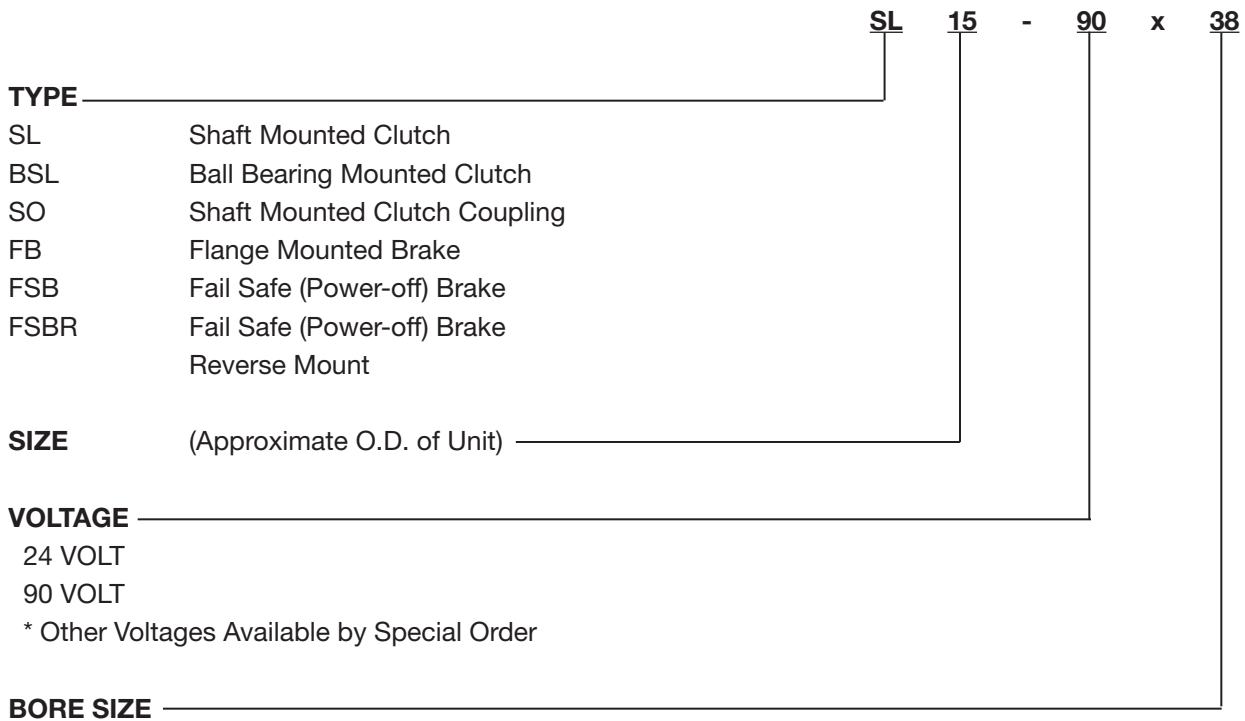

### SPECIFICATION

The Fractional HP product offerings include three shaft mounted clutches and three flange mounted brakes. In the shaft mounted line, the SL and BSL series are used to couple two parallel shafts, and the SO series is used to couple two in-line shafts. They are engineered for easy installation, and incorporate a zero backlash armature hub assembly. In the flange mounted line, the FB series is “power-on” and the FSB and FSBR series are “power-off”.

### HOW TO ORDER

Fractional HP Clutches and Brakes are ordered by specifying the type of unit, size, voltage and bore size. Part numbers are found on the selection pages for each type of unit. Refer to the part number when ordering.

### NOMENCLATURE

## SELECTION

### Fractional Hp Clutches & Brakes

#### Power-On Clutch & Brake Selection

1. Determine the motor horsepower required (or torque required for sizes 08-15) and speed at the clutch location. For optimum performance, the clutch should be mounted on the highest speed shaft.
2. Using the Selection Chart, identify the proper clutch size-where the shaft speed intersects the HP (or torque) required.
3. Where rapid cycling occurs, check the Allowable Cycles Chart below. If the allowable cycle rate is exceeded, consult DODGE Engineering.
4. Specify the voltage and shaft size when ordering.
5. For optimum performance, use a properly sized control.

#### Allowable Cycles/Minute\*

| Unit Size | RPM | Inertia (Lb-In2) |     |     |     | Unit Size | RPM | Inertia (Lb-In2) |     |     |      |

# SELECTION

## Fractional HP Clutches & Brakes

1. Determine the motor horsepower required and speed at the brake location. For optimum performance, the brake should be mounted on the highest speed shaft.
2. Using the Selection Chart, identify the proper brake size-where the shaft speed intersects the HP required.
3. Where rapid cycling occurs, check the Allowable Cycles Chart below. If the allowable cycle rate is exceeded, consult DODGE Engineering.
4. Specify the voltage and shaft size when ordering.
5. For optimum performance, use a properly sized control.

### FSB Allowable Cycles/Minutes\*

| Unit Size | RPM  | Inertia (Lb-In2) |    |      |      | Unit Size | RPM  | Inertia (Lb-In2) |      |      |      |
|-----------|------|------------------|----|------|------|-----------|------|------------------|------|------|------|

# SELECTION/DIMENSIONS

**SL Series**

The Shaft Mounted SL SERIES clutches are engineered for easy installation. Nine sizes are available for shaft diameters from 3/16" to 3/4". The SL Armature Hub will accept sheaves, sprockets, gears or other typical power transmission drive components. SL Clutches are plated for protection from the environment. The SL units have a zero backlash armature hub assembly.

# SELECTION/DIMENSIONS

**BSL Series**

The Shaft Mounted BSL SERIES clutches are engineered for easy installation. Two sizes are available for shaft diameters from 1/2" to 1". The BSL Armature Hub will accept sheaves, sprockets, gears or other typical power transmission drive components. BSL Clutches are plated for protection from the environment. The BSL units have a zero backlash armature hub assembly.

# SELECTION/DIMENSIONS

## FB Series

The FB Flange Mounted Electric Brakes are designed for easy installation. These power on brakes engage when voltage is applied and release when the voltage is turned off. FB Brakes are available in nine sizes in shaft diameters from 3/16" to 1". These brakes can be used to accurately and repetitively decelerate inertial loads or to control web tension. (Contact application engineering for application assistance.) They incorporate zero backlash style armature assembly.

# SELECTION/DIMENSIONS

**FSB Series**

FSB SERIES Power Off Brakes are designed to decelerate or park inertial loads when the voltage is turned off, either intentionally or accidentally (as in the case of a power failure). These units can be bulkhead or motor mounted and are available in seven torque ranges and shaft sizes 3/16" to 3/4". These units employ unique friction material for long life and quiet operation.

## FSB Series Dimensions

| Size    | Part No. | Volts  | Bore In. ★ | Nominal Keyway | Static Torque (Lb.-In.) | A Max | B Nom | C Nom | D Max | E Max | F Min | G Nom | H Max | I ±.500 | J Nom | K Min |

# SELECTION/DIMENSIONS

## FSBR Series

FSBR SERIES Power Off Brakes are designed for applications requiring minimum space or on motors with short shaft extensions. When mounted, the armature hub on these units is not exposed like the FSB series. These units are available in five torque ranges and shaft sizes from 5/16" thru 3/4". Unique friction material is employed for long wear life and quiet operation.

## Power Supplies

### Model 50 - Conduit box Supply

- Controls one Brake or Clutch
- Input: 120 VAC; 50/60 Hz
- Output: 90 VDC
- Rating: 0.8 amps
- Full wave rectifier
- Dimensions: 5/8" H, 2" W, 1-3/8" D
- Part Number **032408**

### Model 75 - Conduit Box Supply

- Controls one Brake or Clutch
- Input: 230 VAC; 50/60 Hz, 1 Phase
- Output: 90 VDC Nominal
- Rating: 0.4 amp Maximum
- Dimensions: 0.62" H, 1.40" W, 0.90" D
- Part Number: **030336**

### Octal Socket

- Socket used with Model 100, 200 and 250 power supplies
- Prewired
- U. L. approved
- Industry Standard design
- Dimensions: 3/4" H, 2 1/2" W, 2" D
- Part Number: **032401**

### Model 100-Octal Base Mount

- Controls one brake or clutch
- Used with octal socket
- Full wave rectifier
- Input: 120 VAC; 50/60 Hz
- Output: 90 VDC
- Rating: 1.5 amps
- Dimensions: 2" H, 2" W, 2" D
- Part Number: **032400**

## Power Supplies

### Model 200-Octal Base Mount w/Fuse

- Controls one brake and clutch, or two clutches or two brakes
- Input: 120 VAC; 50/60 Hz fused
- Output: 90 VDC
- Used with octal socket
- Full wave rectifier
- Rating: 1.5 amps
- Fused for overload protection
- Dimensions: 2 1/2, H, 2, W, 2, D
- Part Number: **032402**

### Model 250 - Octal Base Mount

- Controls one Brake and Clutch; or two Clutches or two Brakes
- Used with Octal Socket
- Input: 115 VAC; 50/60 Hz
- Output: 15-90 VDC Nominal one unit, 90 VDC for the other unit
- Rating: 0.5 amp Maximum
- Dimensions: 2.88" H, 2.38" W, 1.75" D
- Part Number: **030337**

## Motor Brakes

### Motor Brake Coil Data

DODGE D-Series motor brakes are equipped with DC voltage coils which are capable of a variety of nameplate voltage possibilities. Please consult Voltage Notes below the chart for these capabilities.

| Coil Voltage          | 3 and 6 Ft.-Lb      |                   | 10 thru 50 Ft.-Lb   |                   |
|-----------------------|---------------------|-------------------|---------------------|-------------------|
|                       | Current Draw (Amps) | Resistance (Ohms) | Current Draw (Amps) | Resistance (Ohms) |
| 115/230 VAC 60 Hz (1) | 0.19                | 562               | 0.28                | 387               |
| 230/460 VAC 60 Hz (2) | 0.10                | 2078              | 0.14                | 1550              |
| 287/575 VAC 60 Hz (3) | 0.09                | 2987              | 0.12                | 2245              |
| 104/208 VAC 60 Hz (4) | 0.24                | 384               | 0.31                | 290               |
| 190/380 VAC 50 Hz (5) | 0.13                | 1341              | 0.19                | 923               |
| 250/500 VAC 50 Hz     | 0.10                | 2336              | 0.13                | 1793              |
| 48 VDC                | 0.48                | 100               | 0.58                | 82                |
| 24 VDC                | 0.97                | 24.70             | 1.14                | 21.70             |
| 12 VDC                | 1.95                | 6.16              | 2.24                | 5.40              |

### Voltage News:

- 115/208-230 VAC 50 or 60 Hz, 133/265 VAC 60 Hz, 110-125 VDC
- 208-230/460 VAC 50 or 60 Hz, 240/480 VAC 60 Hz, 220/440 VAC 50 Hz, 230 VDC
- 287/575 VAC 60 Hz, 275/550 VAC 60 Hz, 300/600 VAC 60 Hz
- 104/208 VAC 50 or 60 Hz, 100/200 VAC 60 Hz 90-95 VDC
- 190/380 VAC 50 Hz, 260/400 VAC 60 Hz, 208/416 VAC 50 Hz

### General Notes:

- Current and Resistance values are approximate only.
- Current and Resistance for other nameplate voltages may vary slightly. Consult DODGE Engineering for actual values
- Coil Resistance is measured between leads B4 and B5.

### ELECTRICAL CONNECTIONS

Standard DODGE D-Series motor brakes operate on single phase, dual voltage AC.

Connections should be made per Chart 1 (similar chart is also included in a label on the brake). To change the operating voltage, simply change the wiring connections per Chart 1.

When changing brake wiring connections for operation at another voltage, be sure to verify the brake's compatibility with the voltage desired.

Consult Instruction Manual #499765 for complete details on Electrical Connections of DODGE D-Series motor brakes.

**Chart 1**

| Voltage             | Power Line A | Power Line B | Insulate Together | Insulate Alone |
|---------------------|--------------|--------------|-------------------|----------------|
| AC Voltage-Low (1)  | B1           | B2           | B3 & B5           | B4             |
| AC Voltage-High (1) | B1<br>B5     | B2           | -                 | B3<br>B4       |
| DC Voltage-Low      | B1           | B2           | B3 & B5           | B4             |

#### Notes:

- Unless specified, all brakes have dual voltage coils. For example, with a 230/460 VAC brake, low voltage = 230 VAC and high voltage = 460 VAC.

#### AC Voltage - Low and DC Voltage

#### AC Voltage - High

## FEATURES/BENEFITS

### FLEXIDYNE

- **Smoother, Faster Acceleration**

- Smaller motors may be used
- Motor starts under no load conditions
- Smoother starts
- Starting torque can be easily customized

- **More Efficient Design**

- Permits use of standard NEMA Design B motors
- High torque or high slip motors not needed
- Reduced voltage starters not needed
- Wound rotor motors not needed

- **More Efficient Running**

- No slip at running speed means no wear, no heat, no power loss

- **Overload Protection**

- Provides overload protection at overloads somewhat greater than starting torque
- Protection devices to prevent damage to FLEXIDYNE are available

- **Low Current Draw**

- Less than twice the nameplate amperage during both starting and overload periods
- Many electric utilities recommend FLEXIDYNE

- **Increased Productivity**

- Eliminates product spillage and machine damage due to harsh starts or jammed loads

## FLEXIDYNE

### SPECIFICATION

FLEXIDYNE is available in three designs: Drives, Couplings, and C-Flex Modules to meet most system needs. The Drive style is designed to mount directly on the motor shaft to provide an extremely compact unit for belted service. The Coupling style provides a versatile solution for transmitting torque between in-line shafts. The C-Flex Module style provides all of the benefits of regular FLEXIDYNE in a compact package that readily mounts between C-Face motors and reducers.

### HOW TO ORDER

#### DRIVE STYLE

Specify mechanism size and bore size. Select a sheave from the selection tables found in the Modifications/Accessories section. Refer to the part number when ordering.

#### COUPLING STYLE

On size 5C - specify bore size. A complete coupling consists of (1) output hub and (1) mechanism.

On larger sizes - specify coupling size, and bore size. A complete coupling consists of (1) mechanism, including flexible disc, (1) Poly-Disc flange, and (2) bushings.

Type PH Couplings - specify coupling size, bore size of the driven end and the motor end. A complete coupling consists of (1) mechanism, (1) Taper-Lock or Bored-To-Size flange assembly, and (1) element.

Refer to the part numbers when ordering.

#### C-FLEX MODULE STYLE

Specify the C-Flex unit size and the FLEXIDYNE mechanism. Refer to the part numbers when ordering.

#### FLOW CHARGE

Determine the amount of flow charge to be ordered by referring to the Flow Charge tables in the Modifications/Accessories section. Choose between cast steel and stainless. Refer to the part number when ordering.

### NOMENCLATURE

## SELECTION

## FLEXIDYNE

## SIMPLIFIED SELECTION PROCEDURE

The tables on pages PT3-6 -PT3-7 give FLEXIDYNE mechanism size and amount of flow charge to provide starting capacities from 100-200% of motor nameplate HP of a NEMA Design B squirrel cage induction motor. This starting capacity is satisfactory for most ordinary industrial applications.

The FLEXIDYNE unit sizes shown in the simplified selection tables suggest the most economical FLEXIDYNE mechanism for a given RPM and HP. In some cases, under the same conditions, there may be other sizes of FLEXIDYNE which may be utilized.

## STEP 1

Determine the approximate starting torque percentage for the application. As a guide, suggested percentages are listed in the table below.

## STEP 2

Determine motor speed and HP to be used. Refer to tables on pages PT3-6 -PT3-7 based on 1760, 1175, or 875 RPM NEMA Design B motors.

## STEP 3

Check maximum bore from Selection/Dimensions pages.

## FLEXIDYNE Mechanism Starting Torque

| Application         | Range    | Application           | Range    | Application  | Range    |
|---------------------|----------|-----------------------|----------|--------------|----------|
| Air Conditioning    | 130-175% | Cranes (Bridge Draw)  | 150-200% | Mixers       | 130-150% |
| Agitators           | 130-175% | Crushers              | 150-200% | Oven Drivers | 150-175% |
| Belt Conveyors      | 130-150% | Dryers                | 130-175% | Paper Mills  |          |
| Blenders            | 130-175% | Fans                  | 150-175% | Agitator     | 130-175% |
| Blowers             | 150-175% | Lumber Chippers       | 150-200% | Hydropulper  | 130-175% |
| Bucket Elevators    | 130-175% | Sawdust Conv.         | 130-175% |              | 150-200% |
| Can Filling Machine | 125-150% | Matl. Handling Equip. | 130-150% | Drier        | 130-150% |
| Compressors         | 150-175% | Mills (Ball, Pebble)  | 150-175% | Pumps        | 125-150% |

**NOTE:** Since FLEXIDYNE Drives and Couplings are selected primarily as torque limiting devices by using the starting torque percentages shown above, the use of a service factor is not necessary.

## FLEXIDYNE OTHER APPLICATIONS

The information on the previous page provides a simple method of selecting the FLEXIDYNE mechanism size when used with NEMA Design B motors under general operating conditions. Selection for any other application is based on the specific conditions and requirements of the installation. The power transmitting characteristics of the FLEXIDYNE unit vary with input speed and amount of flow charge used. A FLEXIDYNE unit can be adapted to the specific conditions and requirements of the individual application by using the proper amount of flow charge.

**FLEXIDYNE units are not recommended for variable speed applications, engines or speeds below 700 RPM.**

DODGE engineers welcome inquiries on FLEXIDYNE mechanism selection for applications not previously covered. It is suggested that their experience be called upon to recommend the best installation. To contact Dodge engineering please call 864-284-5700.

Please provide the following information with your request:

- Type, HP, RPM, shaft size of motor
- Type, RPM, shaft size of driven machine
- Frequency of starts, reversals, and overloads
- Time required to accelerate
- For high inertia loads,  $WR^2$
- Starting HP and Overload Breakaway HP desired
- Functions the FLEXIDYNE unit must perform

## FLEXIDYNE

### 5C FLEXIDYNE COUPLING

The 5C FLEXIDYNE Coupling uses a formed steel housing and tubular flexible element. See ordering instructions in table below.

#### 5C FLEXIDYNE Couplings

| Available Bores | Keyway      | Part Numbers                                     |  |
|-----------------|-------------|--|--|
|                 |             | MECHANISM for Motor Shaft<br>(Avg. Wt. 2.2 Lbs.) | OUTPUT HUB for Driven Shaft<br>(Avg. Wt. .55 Lbs.) |
| 1/2"            | 1/8 x 1/16  | .....  | 305120   |
| 5/8"            | 3/16 x 3/32 | 305115   | 305121   |
| 3/4"            | 3/16 x 3/32 | 305118   | 305122   |
| 7/8"            | 3/16 x 3/32 | 305037   | 305123   |

**Note:** Total coupling consists of (1) output hub and (1) mechanism. Order by description x bore. To facilitate order processing, order these items by part number. Max bore of mechanism = 3/4"; output hub = 1".

### 55C thru 11C FLEXIDYNE Couplings

The 55C thru 11C size FLEXIDYNE Coupling uses the same flexible disc used in DODGE POLY-DISC Couplings. The molded polyurethane disc offers longer life and smoother, quieter operation. Disc has excellent physical properties yet remains pliable to cushion shock loads and accommodate misalignment.

H and F Flanges, carried in stock, can be arranged in the position which best suits the application. In H type the bushing installs from the Hub side of the flange; in F type from the Face side. Sufficient flow charge is furnished with each unit.

Complete coupling consists of (1) Mechanism, including flexible disc,

(1) POLY-DISC Flange, and two bushings.

TAPER-LOCK bushings sold separately.

† To facilitate order processing specify part numbers.

Determine whether H or F Flange is required and order accordingly.

\* Motor End: 1/2" - 1-1/4" (Min./Max.); Driven End: 1/2" - 1-5/8"

◆ Normal dimension. Shaft end float which increases or decreases "E" by slight amounts is permissible.

★ 1" on driven end, 1-1/2" on motor end.

▲ Space required to loosen bushing with shortened hex key using screws as jack screws-no puller required.

Keywords-See tables below for standard keyways and shallow keyways.

### Standard Keyways

| Bore Range               | Keyway      |

## SELECTION/DIMENSIONS

### FLEXIDYNE

#### TYPE PH FLEXIDYNE COUPLINGS

This unique combination of PARA-FLEX coupling and FLEXIDYNE mechanism offers maximum protection for motors and driven machines. The FLEXIDYNE unit allows the motor to accelerate quickly and start the load smoothly while the Para-Flex coupling permits up to 1° angular misalignment, up to 1/16" parallel misalignment and 3/32" end float. Consequently, starting torque can be tailored to the driven load requirements while torsional and lateral vibration and shock loads are being absorbed or cushioned.

The driven end of the couplings uses TAPER-LOCK bushings only. However, the motor end is available as bushed or bored-to-size. Bored-to-size flanges accommodate larger shafts than possible with bushed flanges. Smaller size flanges are reversible offering the H and F position from the same flange. A choice of H or F flanges is offered for size PX140.

♦ When ordering bushings, specify bore and part number.

† Assembled-to-order. Consult DODGE for delivery.

▲ To facilitate order processing specify part numbers. In sizes 18172 and D18172, determine whether H or F Flange is required and order accordingly. Complete Coupling consists of (1) Mechanism, (1) Taper-LOCK Flange Assembly, (1) Element and (2) Bushings.

Note: Complete Coupling consists of (1) Mechanism, (1) BBS Flange Assembly, (1) Element and (1) Bushing.

♥ Bored per order-Sizes PX70 thru PX110 are furnished with a clearance fit from nominal bores (up to 2" +.000-.000. over 2" +.0015 -.0000). In PX140 size, tolerance will be applied to custom bores (up to 3" +.000 -.001. over 3" thru 6" +.0000 -.0015; over 6" +.000 -.002). Largest Bore listed should be considered as maximum.

⊗ One furnished over keyway.

♣ Not furnished unless specified on order.

\* Standard keyway is the same as shown on page. For shallow keyway exceptions, see table at right:

NOTE: Taper-LOCK bushings sold separately

♦ Approximate weight with maximum bore

★ -.010 to -.015" no keyway

| BS Flg. Size | Bore Range        | Keyway     | NOTE-Key furnished for these exceptions only |

- ♣ Driven shaft should not extend into coupling beyond dimension E.
- † Space required to loosen bushing with shortened hex key using screws as jackscrew no puller required
- ▲ Motor shaft may extend into coupling beyond dimension G but not beyond dimension K.
- \* Reversible flanges permit Type H or F from the same flange.
- Normal distance between shafts. End float which increases or decreases W by slight amounts is permissible.
- ♥ Distance from driven end to center of gravity of driven section of coupling.
- ♣ Weight of driven section with maximum bore and flow charge.

- ◆ Socket head cap screw.
- \*\* Hex head cap screw, SAE Grade 8; Optional: Nickel plated Grade 8 screws

Keyways-Standard Keyways are shown on page PT3-11. For Shallow keyway exceptions see table below.

# SELECTION/DIMENSIONS

## FLEXIDYNE C-FLEX MODULE

C-Flex is a system for easily adapting stock FLEXIDYNE couplings to conventional AC motor/C-Face reducer drive combinations. The advantages of this low cost arrangement include soft start and intermittent overload protection utilizing popular NEMA-B motors and across-the-line switching. Costly reduced voltage starters or specially wound motors are not required. FLEXIDYNE unit operates bi-directionally

(reversing) and allows starting of heavy inertial loads without oversized motors.

C-Flex fits all standard NEMA C-Face mountings of 56C, 140TC, 180TC and 210TC frame utilized on 1/2 thru 10 HP, 1750 RPM AC motors. The C-Flex output bearing provides support for single-bearing reducer types, but is equally suitable for reducers having two input shaft bearings.

## FLEXIDYNE FLEXIDYNE Flow Charge

Cast steel flow charge is furnished unless otherwise specified. Sufficient amounts for all applications are furnished and included in the price of each FLEXIDYNE unit. The part numbers listed here apply only when extra flow charge is ordered or the application requires stainless steel flow charge.

Flow charge is packaged in a tough transparent plastic bottle which is graduated and has a handy pour spout. This makes handling of flow charge easy whether pouring into the unit or removing flow charge if a change in torque is desired.

Stainless steel flow charge is recommended for applications subject to excessive moisture, humidity or wide temperature variations that may cause internal condensation. It may be ordered to replace that in an existing unit or in place of the cast steel flow charge when ordering a FLEXIDYNE unit.

Sizes 5, 5CF, and 55 FLEXIDYNE mechanisms use SAE S110 (.0234, maximum diameter) steel shot. In sizes 70 and up, SAE S170 (.0331" maximum diameter) steel shot is used.

★ Composite groove to accommodate either A or B belts

† These sizes also fit 70D

◆ Made to order sheaves, price on application

▲ Use "B" Dyna-Cog Belt, not standard "B"

■ Weight does not include bushing. Order from page PT3-18

## FLEXIDYNE

The tables on the previous pages list stock sheaves available for use on FLEXIDYNE Drives from size 55D thru 15D. The size 5D uses integral sheaves which are shown on page PT3-8. The 18D sheaves are made-to-order.

Avoid the use of bored-to-size sheaves which use setscrews which may distort sleeve or damage bearings. Order sheaves by part number listed in tables on previous pages PT3-16 - PT3-17. Refer to V-Drive tables on Pages PT3-18 - PT3-24. Information on made-to-order sheaves is shown below

### FLEXIDYNE Sheave Bushings

| Dwg. Ref. | Bush. Type | Part Number | Wt. (Lbs.) | Size           |
|-----------|------------|-------------|------------|----------------|
| Fig. 1    | QD         | * 120580    | .6         | SH x 1-11/16   |
| Fig. 2    | TAPER-LOCK | * 117071    | .5         | 1610 x 1-11/16 |

\* These bushings used with 55D FLEXIDYNE. Must be used without key

▲ Locate right side of M dimension shown here @ right end of G dimension as shown in drawing for size 9D on page PT3-8

\* For 3V, 5V groove sheaves outside diameter is shown. For A, B and C groove sheaves, pitch diameter is shown."

★ TAPER-LOCK furnished for 6.4 and larger O.D.

◆ TAPER-LOCK furnished for 6.6 and larger P.D.

Stock FLEXIDYNE sheaves should be used whenever possible. However Made-to-Order sheaves which conform to diameter and groove limitations listed in table at left, can be furnished. Consult DODGE if sheave required does not fall within these limits.

Made-to-order sheaves will be priced on application. Consult DODGE for price and delivery. The following should be included with your inquiry:

1. Style of Sheave (Bolt-on, Integral, TAPER-LOCK, etc.)
2. No. of Grooves.
3. Belt Size.
4. Sheave Dia. (State whether O.D. or P.D.)
5. Quantity Req'd.

\*\* Use one belt, either A or 4L.

▲ Pitch diameter of integral sheaves supplied with stock 5D-FLEXIDYNE.

◆ "A" Belts may be used in place of 4L belts on 3.0 P.D. sheaves or larger.

"AX" Belts may be used in place of 4L belts on 2.2 P.D. sheaves or larger.

"B" Belts are not recommended in place of 5L belts.

"BX" Belts may be used in place of 5L belts on 4.0 P.D. sheaves or larger.

\* All Sheaves are DODGE stock sheaves. Size numbers are shown for FHP 4L and 5L sheaves; datum diameters for Dual Duty sheaves.

Table may be interpolated for HP and cycle times between those figures listed

\* Starting HP is dependent on the amount of flow charge used.

Thermal capacities are shown for single cavity units. For duplex cavities, starting horsepower = (HP \* Starting Torque%)/2

Caution: At these capacities, the housing temperature may reach 250 degrees F.

For duplex cavities, starting horsepower = (HP \* Starting Torque%)/2

**Caution:** At these capacities, the housing temperature may reach 250 degrees F.

# FEATURES/BENEFITS

## Fluid Coupling

- **Smoother and Shock Free Operation**
  - Motor starts under no load conditions
  - Smoother starts
- **More Efficient Design**
  - Permits use of standard NEMA Design B motors
  - Eliminate need for motors with special winding
  - Wound rotor motors not needed
- **Overload Protection**
  - Provides overload protection at overloads somewhat greater than starting torque
  - Protection devices to prevent damage to Fluid Couplings are available
- **Low Current Draw**
  - Less than twice the nameplate amperage during both starting and overload periods
  - Many electric utilities recommend Fluid Couplings
- **Increased Productivity**
  - Eliminates product spillage and machine damage due to harsh starts or jammed loads

## FEATURES/BENEFITS

### TORQUE-TAMER

#### DODGE TORQUE-TAMER Clutches

Low cost overload protection that's a cinch to adjust. Intermittent shock loads or drive overload conditions can stress reducers to a point of premature failure. DODGE TORQUE-TAMER clutches provide a simple, economical solution. When an overload occurs, the TORQUE-TAMER clutch is designed to slip, protecting the valuable reducer and other components in the drive train. Once the overload is cleared, the TORQUE-TAMER clutch automatically picks up the load.

A DODGE TORQUE-TAMER clutch is easily set to the required slip-protection torque level, using standard wrenches.

#### QUALITY FEATURES

- Non-asbestos friction discs
- Long-life bushing

New keyed bushing will not slip on the hub. Provides improved bearing surface for sprocket to ride on during overload slip. NOTE: Because of the possibility of excessive heat build-up, the TORQUE-TAMER clutch is not recommended for continuous slip duty.

#### EXCLUSIVE "EASY SET" ADJUSTMENT

Torque adjustment is a simple matter, accomplished quickly! The need for hammer and block, brute strength and spanner wrenches is eliminated. No sweat. No wasted time.

For maximum torque, tighten the adjusting nut to finger tight and use a small wrench to tighten the three cap screws until the heads bottom out. For less torque, loosen the cap screws and set screws. Then back off the adjusting nut from one to seven spline notches, depending on the torque desired. Then retighten set screw and cap screws. Please consult Instruction Manual (MN4038) for complete details. This Instruction Manual is available on [www.dodge-pt.com](http://www.dodge-pt.com).

#### AUTOMATIC RESET

The DODGE TORQUE-TAMER clutch gives machinery permanent protection against overloads during starting, reversing or driving-by slipping at the desired load.

When an overload occurs, the driven member slips between long-life, clutch-type friction discs. After slipping has started, it will continue at approximately 90% of the torque setting, due to the lower coefficient of friction when slipping, until the overload condition has been corrected. It resumes driving without resetting when the overload is relieved.

For speeds above 500 rpm please consult Dodge Engineering at 864-284-5700

#### HIGHER TORQUE RATINGS

Spring design provides higher torque ratings for No. 35 and No. 50 TORQUE-TAMER clutches. This results in more uniform coverage between minimum and maximum torque range of the TORQUE-TAMER clutch.

#### APPLICATION VERSATILITY

DODGE TORQUE-TAMER clutches may be used with stock or special sprockets, gears, sheaves, flange or other driven members. It is recommended that the rubbing sides of the driven member be ground to provide a smooth rubbing surface of 65 to 125 micro-inches.

Higher torque ratings can be obtained by the use of a second spring nested within the original spring. (See torque rating table on page PT5-4.)

#### MINIMUM MAINTENANCE

The DODGE TORQUE-TAMER clutch is simple in design, compact, efficient, and built for long life. It provides low cost torque limiting service for a wide variety of applications. No lubrication. . . minimum maintenance.

TORQUE-TAMER clutches are supplied complete with friction discs and one spring. The following are ordered separately:  
**SPROCKET**-Stock sizes shown on page PT5-6. Non-stock sizes can be furnished as reworked A-Plate sprockets listed in the sprocket section of the DODGE Engineering Catalog.  
**BUSHINGS**-Specify size and width and/or part no. as tabulated.  
**EXTRA SPRING**-Provides higher torque rating as tabulated. Second spring is nested into first spring.

## TORQUE-TAMER

### SPECIFICATION

The DODGE TORQUE-TAMER is a protective device that is designed to slip when overloaded, thus protecting the valuable reducer and other components in the drive train. Once the overload is cleared, the TORQUE-TAMER clutch will automatically re-engage. No resetting is required.

### HOW TO ORDER

TORQUE-TAMER clutches are ordered by the size of the TORQUE-TAMER, the bore size of the unit, and the sprocket and bushing width required. The DODGE TORQUE-TAMER is supplied with the friction discs and one spring. The sprocket, bushings, and additional spring (if needed) must be ordered separately.

### NOMENCLATURE

# SELECTION/DIMENSIONS

## TORQUE-TAMER

**STEP 1:** Determine torque at which clutch should limit or slip.

$$T = \frac{HP \times 63025}{RPM} \times \text{Limit Factor}$$

Limit factor determines point at which TORQUE-TAMER should slip above nominal load.

**STEP 2:** Refer to Chart 1. Select the TORQUE-TAMER size that falls within the min./max torque range. Verify the max bore for the TORQUE-TAMER is within specification. This chart will also determine the number of springs required and the spline setting for the TORQUE-TAMER.

**STEP 3:** Refer to Chart 2 to verify the minimum number of sprocket teeth required for the TORQUE-TAMER sprocket. From Chart 2, also determine the bushing width required.

**EXAMPLE:** 3HP, RPM at TORQUE-TAMER 175, Needs TORQUE-TAMER to limit or slip at 150% of nominal torque.

- Limit factor is 150%/100%=1.5

$$T = \frac{3HP \times 63025}{175 \text{ RPM}} \times 1.5 = 1,620 \text{ lb-in}$$

- Select size from Chart 1. Minimum size is #35 TORQUE-TAMER. One spring will be sufficient, however, a second spring can be added for increased torque capability (should parameters of application required additional torque).

**Chart 1 -**

**Note**

Graph indicates approximate rated torque vs. number of splines adjusting nut is backed off from finger tight.

Numbers on calibration lines indicate TORQUE-TAMER model and quantity of compression springs. Example: 35-2 is a model 35 TORQUE-TAMER with 2 springs.

- Check Chart 2 for maximum bore and minimum sprocket teeth and bushing requirements.

**CHART 2 - Minimum Allowable Sprocket Teeth• & Width of Bushing Required & Maximum Bore Capability**

## SELECTION/DIMENSIONS

### TORQUE-TAMER TORQUE-TAMER

#### Sprocket

Stock TORQUE-TAMER sprockets are bored to fit TORQUE-TAMER clutches. Sprocket faces are machined smooth and parallel to provide proper interface with friction discs. Rubbing sides are micro ground to 65 to 125 micro-inches.

Standard A-Plate sprockets can also be reworked for use with TORQUE-TAMER clutches. Refer to DODGE List price Book for modifications charges.

## FEATURES/BENEFITS

### TAPER-LOCK Bushings

- Clean, Compact Design
- An Industry Standard for over 40 years
- Easy-on, Easy-off
- 8° Taper-Grips Tight, Holds Tight, Runs True, No Wobble
- Total System Concept: Bushings, Hubs, Adapters and Products
- World-Wide Acceptance and Availability
- Flush Mounting-No Protruding Parts
- Diamond **D**® Integral Key for Added Value and Convenience

#### DODGE TAPER-LOCK BUSHING WITH INTEGRAL KEY

- Popular bore sizes, 1008 thru 2517
- Capitalizes on proven DODGE sintered steel technology
- Convenience: No more fumbling with a separate key and setscrew over the key. Integral key cannot work loose or fall out.
- More Secure fit: Clearances between key and bushing are automatically eliminated, providing a more precise fit. Provides full key even in maximum bore sizes. . . No more "shallow keyseat" compromise.
- Cost Reduction: Eliminates labor cost associated with installing key and separate key, and associated inventory expense.
- Engineered and Tested Design: Integral key concept thoroughly analyzed, including computerized Finite Element Analysis (FEA), for stress evaluation. Extensive laboratory testing included static and dynamic loading on customized machinery. Results demonstrated in successful field applications.

TAPER-LOCK Integral Key Bushing

### Simple Mounting

#### Easy On

- Insert bushing into sprocket
- Match holes (not threads).
- Put screws into holes that are farthest apart
- Slip entire unit onto shaft
- Set drive alignment and tighten screws

#### Easy Off

- Take both screws out entirely
- Insert one screw into hole that is threaded in the bushing only
- Use as jackscrew to disengage bushing

### IMPORTANT!

Do not use lubricants or anti-seize compounds on tapered bore, bushing suitcase, shaft or screws. Complete installation instructions are available on [www.dodge-pt.com](http://www.dodge-pt.com).

**Note:** For dimensions required for machining hubs, consult factory.

■ Hub diameter required depends on the application.  
Hub diameter shown is based on 30,000 P.S.I. minimum ultimate tensile strength.

◆ Important: refer to service factor information on page PT6-4.

● Space required to tighten bushing. Also space required to loosen screws to permit removal of hub by puller.

★ Space required to remove bushing using jackscrews-no puller required

▲ Standard hex key cut to minimum usable length.

† Use in position shown in drawing above for tightening bushing on shaft. When loosening bushing remove screws and use all except one in the holes. other

Note: For dimensions required for machining hubs, consult factory.

- Hub diameter required depends on the application. Hub diameter shown is based on 30,000 P.S.I. minimum ultimate tensile strength.
- † Use in position shown in drawing above for tightening bushing on shaft. When loosening bushing remove screws and use all except one in the other holes.
- Space required to tighten bushing. Also space required to loosen screws to permit removal of hub by puller.
- ★ Space required to loosen bushing using screws as jackscrews - no puller required.
- ◆ Peak torque loads must not exceed torque capacity rating shown. Capacity values shown are for light starting and steady running conditions. For more severe duty, divide torque capacity by service factor suggested in following table.

| Service Factor | Type of Loading  |
|----------------|--|
| 1.00           | Light Starting & Steady Running                                    |
| 1.50           | Light Starting & Uneven Running                                    |
| 2.00           | Fairly Heavy Starting & Steady Or Uneven Running                   |
| 2.50           | Light or Heavy Starting & Moderate Shock Running                   |
| 3.00           | Light or Heavy Starting & Severe Shock Running, or Reversing Loads |

# SPECIFICATION

## TAPER-LOCK Bushings - Reborable

**NOTE:**

All reborable bushings are stocked without sawsplit to facilitate re-machining. Sawsplit must be made in bushing to allow it to compress for proper gripping of the shaft. Factory rebores and keyseat service as listed in MLP price book includes sawsplit

# SPECIFICATION

## TAPER-LOCK Weld-On Hubs

DODGE Weld-On hubs are made of 1015-1025 steel, drilled, tapped, and taper bored to receive TAPER-LOCK bushings. They are useful for welding into fan rotors, pulleys, plate sprockets, impellers, agitators, etc. which must be firmly mounted onto shafting. Four types of hubs are available from stock:

**TYPE W/WA:** Rugged, full length size for single-hub heavy-duty applications.

**TYPE K:** More compact design, especially useful for two-hub construction such as conveyor pulleys.

**TYPE S:** Originally designed for use in smaller sprockets using up to Taper-Lock size 3535 bushings. Suitable for many other lighter-duty applications.

**TYPE F:** Features a larger flange diameter that can be welded into standard steel tubing to fabricate conveyor pulleys or process rolls.

### TAPER-LOCK Adapters

PT Component  
Quick References

Couplings

Clutches and Brakes

FLEXIDYNE

Fluid Couplings

TORQUE-TAMER

Bushings

Adapters for TAPER-LOCK bushings are recommended for use where it is more convenient to straight bore than to drill, tap and taper bore hubs to accommodate bushings.

The adapter is a gray iron, taper-bored sleeve which fits into the straight bore of a hub. The bushing simply fits inside the adapter which is tapped for the bushing screws. When tightening the locking screws, adapter is expanded against the hub bore contracting the bushing tightly upon the shaft. See page PT6-3 for bushing data and wrench space required.

\* .001 to +.003 tolerance recommended for bore of hub.

† For reference. Severe conditions may require larger hub. Heavy well located web may permit smaller hub. Hub diameter required depends on the application. Consult factory giving full information on the proposed design. Hub diameters shown are based on 30,000 and 50,000 P.S.I. minimum ultimate tensile strength respectively for Class 30 gray iron and steel hubs.

## FEATURES/BENEFITS

### QD Bushings

- 4 Degree Taper
- Easy on/Easy off
- Manufactured precisely to industry standards
- Conventional or Reverse Mounting, Including sizes M thru W - DODGE exclusive!
- QD is a registered trademark of Emerson Electric.

#### CONVENTIONAL

#### REVERSE

### Conventional Mounting

#### Easy On

- Place bushing in product
- Align clearance holes in product with threaded holes in bushing
- Install screws and lockwashers thru clearance holes, finger tight
- Slide assembly onto shaft, flange first
- Locate assembly on shaft for proper drive alignment
- Tighten cap screws alternately and evenly to specified torque

#### Easy Off

- Remove cap screws and install in product threaded holes
- Alternately and evenly tighten screws until bushing grip is released
- Flanged Design

### Reverse Mounting

#### Easy On

- Place bushing in product
- Align clearance holes in product with threaded holes in bushing
- Install screws and lockwashers thru clearance holes, finger tight
- Slide assembly onto shaft, flange outward
- Locate assembly on shaft for proper drive alignment
- Tighten cap screws alternately and evenly to specified torque

#### Easy Off

- Remove cap screws and reinstall in flange threaded holes
- Alternately and evenly tighten screws until bushing grip is released

**IMPORTANT! Do not use lubricants or anti-seize compounds on tapered bore or bushing surfaces. Complete installation instructions are available at [www.dodge-pt.com](http://www.dodge-pt.com).**

P/N's marked (+) are Integral Key Bushings  
 Bore sizes marked (#) will be supplied with 1/2" wide keyway unless the 5/8" wide keyway is specified when ordering  
 \* Key furnished for these sizes ONLY  
 \*\* Key not furnished for MM bores sizes

# SPECIFICATION

P/N's marked (+) are Integral Key Bushings

Bore sizes marked (#) will be supplied with 1/2" wide keyway unless the 5/8" wide keyway is specified when ordering

\* Key furnished for these sizes ONLY

\*\* Key not furnished for MM bores sizes

P/N's marked (+) are Integral Key Bushings  
 Bore sizes marked (#) will be supplied with 1/2" wide keyway unless the 5/8" wide keyway is specified when ordering  
 \* Key furnished for these sizes ONLY  
 \*\* Key not furnished for MM bores sizes

# SPECIFICATION

P/N's marked (+) are Integral Key Bushings

Bore sizes marked (#) will be supplied with 1/2" wide keyway unless the 5/8" wide keyway is specified when ordering

\* Key furnished for these sizes ONLY

\*\* Key not furnished for MM bores sizes

## SPECIFICATION

### QD Bushing - Metric Bore/Metric Hardware

#### FEATURES

- ◆ DODGE QD-style bushings stocked in popular finish bore sizes and minimum plain bore, for custom reboring
- ◆ DODGE Metric QD bushings supplied with metric hex-head cap screws and lock washers
- ◆ Stock reborable bushings available for custom reboring
- ◆ Reboring and sawsplit available from DODGE for nominal extra charge  
**NOTE:** Rebore by others must be sawsplit after rebore
- ◆ Can be used with DODGE HTD sprockets for conventional mounting only (*English thread hardware required for demounting.*)

## QD Hubs

DODGE QD Weld-On hubs are useful for welding into fan rotors, pulleys, plate sprockets, impellers, agitators, etc. which require secure mounting to the shaft. These hubs are made of low carbon steel for good welding compatibility. The data tabulation shows the standard QD bushings that are used with these hubs.

## QD Weld-On Hubs For Conveyor Pulleys

DODGE QD Weld-On Hubs for conveyor pulleys are specifically designed for use in the end disc of a conveyor pulley. Their short length through bore provides more

forgiveness under the operating stresses of the pulley. These hubs are manufactured from low Carbon steel for good welding compatibility

## FEATURES/BENEFITS

### GRIP-TIGHT Bushings

GRIP-TIGHT is a revolutionary bushing system that will decrease maintenance costs and increase productivity and uptime. The 360° contact provides a secure fit onto the shaft, reduces vibration, eliminates shaft damage and makes the use of keys obsolete.

#### Features and Benefits:

- Concentric contact on shaft for better grip
- Less vibration
- Superior balanced system
- No keyways required
- No fretting corrosion
- Can be used with commercial shafting
- Reduction in material cost
- Easy on, reliable mounting
- Same bushing concept used in bearings, fan hubs, and sheaves

#### Possible Application:

- Fan hub
- Sheaves and sprockets
- Couplings

**NOTE:** Installation and maintenance instructions for Dodge products are available on [www.dodge-pt.com](http://www.dodge-pt.com)

# SPECIFICATION

## Idler Brackets and Bushings

- Double Adjustable Bracket for Maximum Flexibility
  - Positive Ratchet Locking Between Base and Arm
  - Idler Bushings in TAPER-LOCK® and QD\* Style
  - Use with Stock Products, such as: Sheaves, Roller Chain Sprockets, HTD Sprockets · Compatible with Products Machined for: TAPER-LOCK 1610, 2012 and 2517 Bushings; QD SK, SF and E Bushings
- \* QD is a registered trademark of Emerson Electric.

**FEATURES/BENEFITS**

**TAPER-LOCK and QD Sheaves**

**TAPER-LOCK Sheaves**

**QD Sheaves**

Great for Harsh duty applications, such as Rock Crushers and Wood Chippers.

Dodge Taper-Lock Sheave Line offers:

- A premium solution
- A Bushing system that pound for pound carries more torque, than the QD system.
- A Bushing system that reduces overhung load increasing the life of the other power transmission products in the system.
- An easy on and easy off bushing system with fewer components to install.
- Quality materials
- Manufacturing to Industry recognized tolerances

Great for Standard and Harsh duty applications, suitable for all applications.

Sheaves are manufactured in DODGE plants under strict quality control assurances. Precision machining meets or exceeds joint RMA/MPTA industry standards for smooth operation plus extended belt life. DODGE manufactures all sheaves in plants certified to ISO 9002 Quality Standards.

**Sheave Construction**

DODGE Branded Sheaves come in two bushing styles, QD and Taper-Lock®. In addition to these bushing choices, DODGE now offers choices within our QD Sheaves line. Our QD Sheave line comes in a Standard Duty (SD) and a Heavy Duty (HD) offering.

Dodge QD SD Sheave Line offers:

- Economical Solution for everyday V-Belt power transmission applications
- Quality materials
- Manufacturing to Industry recognized tolerances
- Power transmission applications standard sheave loads and torque

Great for standard applications, such as air handling and fluid pumping.

Dodge QD HD Sheave Line offers:

- High strength solution for higher torque and heavy load applications
- Rigid Hubs and High strength arms
- Quality materials
- Manufacturing to Industry recognized tolerances

DODGE stock sheaves are manufactured from high quality gray iron. They are given a corrosion-resistant finish before packaging and shipping. Sheave construction follows the general format illustrated above: smaller sheaves are of the block construction, intermediate sizes of the web type, and large sheaves of the arm- type construction.

HT500 Synchronous Drives

Roller Chain Sprockets

## TAPER-LOCK and QD Sheaves

### Sheave Balance

Static balance of stock sheaves is suitable for most applications up to a rim speed of 6500 FPM. Dynamic (two-plane) balance is available at extra charge for applications that are more sensitive to vibration. Dynamic balance is recommended for operation above 6500 FPM.

### V-Drive Advantages

- Isolates shock loads and vibration.
- Misalignment capability.
- Drive ratios of 6:1 or more possible.
- Stock drive selections up to:
  - 1100 design HP at 1180 RPM
  - 800 design HP at 1770 RPM
- Low maintenance.
- No lubrication required.
- Quiet operation: Motors, etc. are normally at a higher db level than V-Drives.
- Efficiency of 93% is typical.

### Computer Selection

For fast, accurate evaluation of viable V-Drive alternatives, use the DODGE VIA-VISA software program which is available on the website [www.dodge-pt.com](http://www.dodge-pt.com). Just type the required information on the user-friendly input screen and let the software do the rest. All the significant data on the drive combinations is presented: Cost, RPM, shaft loading, installation tension, face width and diameter, etc. This is shown in a format that allows you to select the best drive for the application. See page PT7-123 for complete information on VIA-VISA.

### WARNING

Stock sheaves are manufactured from gray iron, which is suitable for operation up to 6500 feet per minute rim speed (e.g. 14, max. dia. on a 1750 RPM motor). Operation above this rim speed may cause sheave failure resulting in personnel and/or equipment damage. Refer to the Made-To-Order sheave section for constructions that are suitable for operation at higher rim speeds.

### ARAMIDE CORD BELTS WARNING:

Because of the high horsepower rating of Aramide (Kevlar) cord belts, stock sheaves can not be used. Contact DODGE for made to order high capacity sheaves at 864-234-5700.

## SELECTION/DIMENSIONS

## SELECTION

### Custom-Made Sheaves & Sprockets

#### V-Belt Sheaves & Synchronous Sprockets

Standard stock products offer the best value for most power transmission operations. But, for requirements that cannot be served with stock products, DODGE manufactures custom-made sheaves and synchronous belt sprockets.

#### Custom Construction Options

- Non-stock pitch diameter
- Non-stock number of teeth
- Alternate hub location
- Special material: ductile, steel, aluminum, stainless steel etc.
- Alternate bushing or bore configuration for mounting product onto shaft
- Other non-standard requirements

#### Hub Locations

- Hub central
- Typical for larger diameter products
- Hub offset
- This location is preferred for wider face widths. It is positioned to accommodate the shaft and provides centralized sheave support
- Hub projection
- Required for access to setscrews on smaller bored-to-size products
- Special coating and plating

#### Materials

Stock sheaves, as well as synchronous sprockets, are manufactured typically from high quality gray iron. Frequently specified alternate materials are shown below.

#### Alternate Materials

| Material   | Grade    | Max. Rim Speed (Fpm) |
|------------|----------|----------------------|
| GRAY IRON: | -        | 6,500                |
| DUCTILE    | 65-45-12 | 8,000                |
| IRON:      | 80-55-06 | 10,000               |
| STEEL:     | -        | 10,000               |

Dynamic (two-plane) balance normally required for rim speeds above 6,500 feet per minute (FPM).

Drives that exceed 8,000 FPM should be reviewed by DODGE Engineering.

Synchronous Sprockets

V-Belt Sheaves

#### Mounting Styles

##### Bored-to-size

Required when rim diameter cannot accommodate the bushing that is required for the bore size. One keyseat, as well as one or two setscrews are usually specified.

##### Taper bushed

Specify TAPER-LOCK or QD bushing for required bore size. Verify that hub diameter accommodates bushing. Taper bushed mounting is preferred because this mounting compensates for variations in shaft diameter; provides tight, secure fit; and removes easily for servicing.

##### Taper bore

For use on taper shafts (sketch below). If hub is not central with face, specify which hub end takes large end of bore. Hub at small end will extend 1/8" beyond the "T" dimension. Keyways are standard size, as well as parallel with the taper, unless specified otherwise.

## V-Belts

V-drives have been the mainstay of industrial power transmission for over 60 years. During this time, DODGE has been a major influence, designing and developing innovative concepts in V-belt sheaves and supplying the highest quality belts.

Today's V-drives offer quiet, efficient mechanical power transmission. They provide many thousands of hours of performance, even under conditions of shock load and normal drive misalignment. All of these benefits come at an economic value that is unsurpassed.

HT200/HTD Synchronous Drives

HT500 Synchronous Drives

Roller Chain Sprockets

### D-V WEDGE BELTS 3VX-5VX-8V

- Oil resistant and static conducting
- Permits compact, lighter weight drives flexibility
- High-strength tension member delivers maximum power with minimum stretch
- Built for long-term dimensional stability
- Molded cog construction under 200-inch belt length is reduced

### S-L CLASSIC V-BELTS A-B-C-D-E

- Cable cord envelope construction
- Cool running and flexible
- Strong tensile cords minimize stretch
- Static conducting and heat and oil resistant
- More tolerant of shock loads

### CLASSIC COG V-BELTS AX-BX-CX-DX

Deliver more horsepower and last longer than conventional belts...

- Fully notched cogs for maximum
- High coefficient rubber edge
- Oil resistant and static conducting
- Proven energy-saving design
- Outlasts conventional belts
- Fewer belts required - drive weight

### POLYBAND CLASSIC POLYBAND WEDGE V-BELTS

POLYBAND banded V-belts are engineered to handle those problem drives where vibration, sudden shock loads or misalignment causes belts to turn over, whip or jump off sheave. Two or more belts are inseparable joined together as one single unit. POLYBAND belts may be used without changing sheaves or altering the drive.

• NO JUMP OFF

• NO WHIP

• NO TURN OVER

### DOUBLE-V SEALED-LIFE (HEX)

For serpentine drives

- Transmits power from both sides of belt
- Standard AA, BB, CC cross sections
- Runs in standard classical sheaves
- Oil resistant and static conducting

## SELECTION

### D-V Wedge Narrow Belts

Raw-Edge Molded Cog Construction

Wrapped Construction

- Oil Resistant and Static Conducting
- Permits Compact, Lighter Weight Drives
- Hi-Strength Tension Member Delivers Maximum Power with Minimum Stretch
- Built for Long-Term Dimensional Stability.
- Matched to MPTA/RMA Standards. No additional matching or Matching Codes required.

## SELECTION

### Classic Cog Belts

Deliver more horsepower and last longer than conventional belts

- Fully notched cogs for maximum flexibility.
- High coefficient, energy-efficient rubber edge.
- Proven energy-saving design.
- Outlast conventional belts.
- Fewer belts required - drive weight is reduced.
- Matched to MPTA/RMA Standards - No Additional matching or Match Codes Required

\* 100 Ft reel available

**FLEXLINK BELT APPLICATION GUIDELINES**

1. To obtain link belt length, multiply desired pitch length by .916. This provides correct belt length for initial run-in and seating of belt.
  2. For matched sets of link belts, use the same number of links on each belt.
  3. Do not use link belting above 5000 FPM belt speed.  
Belt speed = .262 x RPM x pitch diameter of sheave.
  4. **Note:** Link belting is not static conducting.  
**Important -**  
For matched sets of link belts use same number of links on each belt.
- Fast installation, installs in a snap
  - Adjustable to any length, adaptable to any drive
  - Reduces vibration
  - Long-lasting construction
  - Reduces inventory - one reel can replace many sizes of standard belting
  - Oil proof construction
  - Order by the foot or by the reel.

## SELECTION

### Stock D-V Wedge Drives: Standard Motor Speeds

**Step 1 - Determine Service Factor.** Refer to Typical Service Factors, Table 2. Locate type of Driven and Driver equipment. (If an idler is used, increase the factor by value indicated.) Correct factor is determined by: 1. The extent and frequency of peak loads. 2. Number of operating hours/year (broken down in average hours/day of continuous service). 3. Proper service category (Intermittent, Normal or Continuous). Select the one closest to the application conditions.

**Step 2 - Compute Design HP.** Multiply normal running HP required or nameplate rating by service factor obtained in Step 1.

**Step 3 - Choose Belt Section.** Using Table 1, below, read up from design hp figure obtained in Step 2 and over from the rpm of faster shaft. This intersection indicates belt section.

**Step 4 - Select the Drive.** a). Using belt section from Step 3, refer to Stock Drive Selection Tables beginning on page PT7-48. b). Under appropriate driver speed column find Driven RPM nearest to the desired speed. To the right note HP per Belt. Read left for Driver/Driven Sheave information. (If driver is an electric motor be sure motor sheave diameter is not less than shown in Table 3.) c). Read onto opposite page and find figure nearest the required center distance. Note Arc-Length Correction Factor in the shaded row below the C.D. figure. d). Read to the top of the table for the belt size. e). To determine number of belts, multiply the HP per Belt value by the ArcLength Correction Factor. This is the corrected HP/belt. Divide design HP by corrected HP figure to determine number of belts required.

#### EXAMPLE OF SELECTION

Select a D-V Wedge drive for a positive blower, with a 2-15/16" shaft, to run @ 290 rpm, driven by a 30 hp, 1160 squirrel cage electric motor with a 2-1/8" shaft. Desired center distance is 26". Service is continuous.

**Step 1 -** Service factor from Table 2 is 1.4.

**Step 2 -** Design HP = 1.4x30 = 42 HP.

**Step 3 -** A 5V belt section is shown in Table 1 when reading to the right of 1160 rpm and up from 42 design HP.

**Step 4 -** Turn to 5V Stock Drive Selection Tables. On page PT7-86, under 1160 RPM Driver, read down to find 290 rpm. The nearest appears as 291.

Note HP/belt as 12.8 for all D-V and Polyband belts over 200" and 15.4 for Polyband belts under 200". Also note sheaves listed as 7.1 Driver, 28.0 Driven. Table 3 shows driver is not undersize. Reading toward the right the C.D. figure nearest 26, is 26.4. The correction factor below the C.D. figure is .92. Top of table shows belt size as 5VX 1120.

The HP/belt for D-V is 15.4. This value x the .92 factor = 14.2 corrected hp/belt. 42 HP ÷ 14.20 = 2.96. Going to the next whole number, drive requires 3 belts. (Center to center operating distance is 26.4 nominal.)

**Order: 1.** 3-5VX 1120 D-V belts. **2.** 1 - 3/5V7.1-2517

TAPER-LOCK Sheave. **3.** 1 - 2-1/8, bore 2517 bushing.

**4.** 1 - 3/5V28.0-3535 TAPER-LOCK Sheave. **5.** 1 - 2-15/16, bore 3535 bushing.

**Table 1 - Narrow Cross Section Selection Chart**

**NOTE:** Selection program VIA-VISA available at [www.ptwizard.com](http://www.ptwizard.com).

# SELECTION

## Stock D-V Wedge Drives: Non-Standard Motor Speeds & Speed-Up Drives.

For Speeds Other Than Standard Motor Speeds:

**Step 1 - Determine Speed Ratio** =  $\left( \frac{\text{Driver RPM}}{\text{Driven RPM}} \right)$

**Step 2 - Compute Design HP.** Multiply normal running HP required or nameplate rating by service factor from Table 2.

**Step 3 - Determine Maximum Diameter** of Driver Sheave

@ 6500 FPM : O.D. =  $\frac{6500 \text{ FPM}}{0.262 * \text{RPM}}$

**Step 4 - Select Belt Cross Section.** Using Table 1, read up from design HP figure obtained in Step 2 and over from the RPM of faster shaft. This intersection indicates belt section.

**Step 5 - Select Drive.** Using the belt section from Step 4, make a tentative sheave selection from **stock drive tables**. (Note that several choices are available in the ratio obtained from Step 1. Other choices close to this ratio may also produce a functional drive.) Read onto opposite page and find figure nearest the required center distance. The Arc-Length correction factor is listed in the shaded row below the C.D. figure. Read to the top of the table for the belt size.

**Step 6 - Size the Drive.** From basic horsepower tables locate HP rating at intersection of RPM of faster shaft row and small sheave column. To this, add the "additional HP" figure based on drive ratio. This becomes the rated HP. Multiply this sum by the arc-length correction factor noted in Step 5. This becomes the corrected HP per belt. To find

Required number of belts :  $\frac{\text{Design HP}}{\text{Correction HP/Belt}}$

### EXAMPLE OF SELECTION

A V-drive is needed for a 30 HP 2200 RPM gasoline engine, with a 2-1/4" dia. shaft, driving a generator, with a 2-7/16" dia. shaft, @ 1800 RPM. It runs 8 hrs. a day. Center distance is 31".

**Step 1 - Speed Ratio** =  $\frac{2200}{1785} = 1.23$

**Step 2 - Service Factor** = 1.2 Design HP = 30 x 1.2 = 36

**Step 3 - Driver Sheave Max. Dia.** =  $\frac{6500}{.262 \times 2200} = 11.3$

**Step 4 - Belt Cross Section** = Table 1 indicates 3VX.

**Step 5 - In 3VX Stock Drive Selection Tables** on pages PT7-66 and PT7-67, find the 1.23 ratio obtained in the Step 1 calculation. At the top of page PT7-64, the most economical drive is shown as 6.5 Driver, 8.0 Driven. The C.D. nearest 31" is 31.1. The correction factor below the C.D. figure is 1.05. Top of the column shows a 3VX850 belt. Refer to Basic HP Tables on page PT7-80 and PT7-81. From the 2200 RPM of faster shaft row and down from the 6.5 smaller sheave heading: 10.2 HP/belt plus an additional hp of .23 in the 1.19 thru 1.26 ratio column. The sum = 10.43 HP/belt x 1.05 arc length correction factor = 10.95 HP/belt.

Number of belts =  $\frac{36}{10.95} = 3.28$  or 4 belts

**Order:** 1- 4 groove 3V 6.5 TAPER-LOCK Sheave, 1-2517 2-1/4" bore bushing, 1-4 groove 8.0 TAPER-LOCK Sheave, 1-2517 2-7/16" bore bushing, 4-3VX850 D-V Wedge Belts.

### Example of a 3V Speed-Up Drive

A 20 HP 1750 RPM AC motor, with a 1-5/8" dia. shaft, is to drive a blower, with a 1-7/16" shaft, @ 2500 RPM. The center distance = 26". Equipment runs 24 hrs./day.

1. Service Factor from Table 2 is 1.2.
2. Design HP=20x1.2=24 HP
3. Speed Ratio =  $\frac{2500}{1750} = 1.43$
4. In Stock Drive Table, under 1.43 ratio, sheaves are listed as 5.6 Driver/8.0 Driven. (In a speed-up drive, the 5.6 sheave becomes the Driven, the 8.0 the Driver.) The opposite page of the table shows the closest center distance as 26.8 with an arc correction factor of 1.03. Belt shown at top of column is 3VX750.
5. From Basic Horsepower Tables a 5.6 sheave @ 2500 RPM = (9.46 + .37) = 9.83. 9.83 X 1.03 arc length correction factor = 10.12 corrected HP/belt.
6. Number of Belts =  $\frac{\text{Design HP}}{\text{Corrected HP}} = \frac{24}{10.12} = 2.37$  or 3 belts.
7. Order: 1-3 groove 3V 8.0 TAPER-LOCK Sheave, 1-15/8" bore 2517 bushing, 1-3 groove 3V 5.6 TAPER-LOCK Sheave, 1-17/16" bore 1610 bushing, 3-3VX750 D-V belts.
